Core Competencies

We are a concrete finishing company specializing in flat concrete work such as driveways, footings, slabs, patios, sidewalks, and steps. Additionally, we excel in poured concrete walls, heavyweight modular block retaining walls, and decorative concrete techniques including exposed aggregate, integral color, salt surface, stamped,

and DOT high early concrete. With years of expertise and specialized tools, additives, and forms, we consistently deliver exceptional results. Whether it's a bespoke custom job or a large-scale project, we tailor our approach to meet our clients' needs.

Differentiators

We have second and third-generation concrete experts who learned their craft on their fathers' and uncles' job sites. Their experience is evident in the high-quality craftsmanship our crews consistently deliver. We maintain a strong presence on-site with at least two layers of supervision. Each crew leader is adept at managing the work independently, supported by project managers who handle issues, anticipate deliveries and workload, and conduct final inspections with owners or superintendents.

This proactive approach ensures we can adapt swiftly to any changes in workload, providing reassurance to our clients.

At Creme de la Creme Concrete, we deeply care about every project we undertake. We recognize that each opportunity is a chance to demonstrate why choosing us was the right decision. Our goal is for every client to confidently declare, "I would hire those guys again without hesitation," upon project completion.

Past Performances

Trader Joe's, Sandy Springs, GA:

We handled the demolition and resizing of the existing loading dock for a large prime contractor who was off-site during the project. Our responsibilities included estimating, sourcing, scheduling, project management, and concrete pouring, all completed in two phases to ensure uninterrupted deliveries. Despite the challenges, including working through the July 4th holiday in 2023, our client was pleased with the outcome.

Whole Foods, Roswell, GA:

We demolished and repoured a 14,000-square-foot heavy-duty commercial driveway leading to a loading dock. Using a high early concrete mix, which achieves full strength in just 72 hours, we accommodated the frequent heavy 18-wheeler traffic effectively. The driveway's increased thickness (10 inches) further ensures durability under demanding conditions.

A and C Development, Alpharetta, GA:

For a client acquiring a building, we demolished and replaced an aging asphalt parking lot with a reinforced concrete one. Our work included making the lot ADA compliant, featuring rebar reinforcement, ample disabled parking spots, and accessible sidewalks with detectable plates and necessary markings. We take pride in creating accessible and functional spaces for all users to enjoy.
