

## ELIGIBILITY REQUIREMENTS

To qualify for the ADMSC Support Initiative, families must meet the following criteria:

### 1. Income Verification:

Documentation confirming the family's income is at or below the Federal Poverty Level.

**2. Residency:** Applicants must be United State Residents.

**3. Medical Diagnosis:** Submission of a formal diagnosis from a licensed healthcare provider outlining the condition for which ADMSC therapy is recommended.

**4. Provider Identification:** Families are responsible for identifying a licensed and qualified provider in their area who is willing to administer the therapy.

**5. Application Submission:** Families must complete an application to the Foundation, providing all required documentation and a detailed explanation of their circumstances.

## Online Donations

In order to advance our mission, we need your help. Please consider partnering with us and making your tax deductible 501(c)(3) donation today.

## TE Lobe Family Foundation

The TE Lobe Family Foundation is dedicated to enhancing the wellbeing and potential of children worldwide by fostering a world where every infant and child can thrive. All children, regardless of socioeconomic status or locale, should have the opportunity for a better future. We provide real hope for families by advocating and supporting initiatives focused on innovative projects and partnerships that will create a lasting impact.

## Dr. Thom E Lobe – Founder

The TE Lobe Foundation was founded by Dr. Thom E Lobe; a distinguished surgeon, medical pioneer, university professor, and philanthropist. Dr. Lobe has been advocating for children's health for the past five decades while being a transformative figure in pediatric surgery, minimally invasive and robotic surgery, and regenerative medicine, including stem cell research.

## AUTISM AND ADIPOSE-DERIVED STEM CELLS

The Foundation supports this promising future therapy, which is currently being studied in clinical trials. Stem cells derived from a parent's fat tissue hold the potential to improve symptoms and enhance quality of life for children with autism.

## ADIPOSE-DERIVED MESENCHYMAL STEM CELL SUPPORT INITIATIVE

### Program Overview: Adipose-Derived Mesenchymal Stem Cell Support Initiative

The TE Lobe Family Foundation is proud to introduce the **Adipose-Derived Mesenchymal Stem Cell (ADMSC) Support Initiative**, a program designed to assist families at or below the Federal Poverty Level in accessing innovative regenerative medical treatments. This program focuses on providing financial assistance for the harvesting and processing of adipose-derived mesenchymal stem cell autografts, a promising future therapy currently being studied for various conditions, including Autism Spectrum Disorder and other chronic or debilitating medical conditions.

While the Foundation does not cover fees associated with treatment or administration, it empowers families to explore their healthcare options from local providers where treatments are deemed safe and compliant with all federal and local regulations.
