

One Carbon Platform. Real-World Impact.

ABOUT US

Loyalty Technologies is a vertically integrated, carbon-based technology platform company focused on engineering high-performance carbon materials from waste-derived feedstocks. We specialize in surface-engineered, defect-controlled carbon media designed for multi-industry applications, including odor control, water treatment, sensing, energy, and functional composites. Our work bridges academic science and applied innovation, transforming underutilized materials into scalable carbon platforms.

OUR PLATFORM

We engineer a tunable carbon material platform from waste-derived feedstocks. Loyalty Technologies designs and develops high-performance carbon materials by controlling structure, surface chemistry, and defect density to achieve application specific performance.

- Tailored adsorption and surface reactivity
- Controlled electrical and electrochemical behavior
- Scalable integration into media, coatings, and composites

FOCUS: ODOR CONTROL

Loyalty Technologies develops engineered carbon odor control solutions for nuisance odors at both the source and point of impact, spanning neighborhood pump stations and residential applications. Our passive, no-power systems are designed for locations where odors directly affect community quality of life.
