

When to Refer for Ceramic Implants

Without Losing the Case (Or the Patient)

Hi Doctor,

You've likely seen it—patients with metal sensitivities, failed titanium implants, or soft tissue complications.

Ceramic implants can be a better alternative for:

- Patients with autoimmune or inflammatory conditions
- Those prioritizing aesthetics or holistic options
- Anterior zone cases requiring superior soft tissue outcomes

Top 3 Referral Triggers:

1. Known titanium or nickel allergy.
2. High aesthetic demand in the smile zone.
3. Chronic peri-implantitis or implant failure.
