

HOW & WHERE WE TREAT FOR **BED BUGS**

Enviro Pest Control strategically applies treatment to key areas where bed bugs hide and breed.

Here's **how** and **where** we treat, and **what you should look for**.

Box Springs & Mattresses

Treatment is applied around the edges and underside of box springs.

Around Electrical Outlets

We apply treatment around electrical outlets and light switches.

Bottoms of Furniture

We treat the undersides and crevices of couches, and other furniture.

Baseboards & Carpet Edges

Treatment is applied along the baseboards, along carpet edges, and any crevices where bed bugs can hide.

WHAT TO LOOK FOR:

Live Bed Bugs

Small, reddish-brown bugs, about the size of an apple seed.

Blackish-brown fecal stains

Shed Skins

Light brown shed skin, left behind as bed bugs grow.
