

HOW & WHERE WE TREAT FOR ROACHES

Enviro Pest Control strategically applies treatment to key areas where roaches hide and breed.
Here's **how** and **where** we treat.

BASEBOARDS & CRACKS

Treatment is applied along baseboards, in cracks, and in crevices where roaches hide.

PLUMBING AREAS & UNDER SINKS

Treatment is applied around pipes, drains, and moisture-prone areas.

BATHROOMS

We treat around toilets, vanities, baseboards, and other common hiding places.

INSIDE CABINETS & DRAWERS

We treat hinges, corners, and undersides where roaches often crawl and hide.

UNDER & BEHIND APPLIANCES

We treat under and behind stoves, fridges, dishwashers, and other appliances.

WHAT TO LOOK OUT FOR:

Lethargic Roaches

Seeing roaches that are slow-moving or lethargic means the treatment is working.

Dead Roaches

Finding dead roaches is a sign the treatment is effective.

Roach Droppings

Small, dark specks (caused by roaches) may be found in hidden areas.

Egg Cases

Brown, oval-shaped cases may be found in cracks, cabinets, or behind appliances.
