

Dream Beauty By Nida

WHAT TO EXPECT DURING HEALING

After the initial procedure, your lips will look bright in color and will feel swollen and tight, but this will change. Please be aware of the healing stages to avoid stressing about your lips. Your lips will go through several stages where they will become noticeably darker, then will become scabbed and itchy, and finally will almost disappear (ghosting stage), before finally healing to between 50% and 70% of their original depth. The stages depicted here are what should be expected.

Once you have gone through a full cycle of skin regeneration (4-6 weeks) most, but not all, of the pigment will remain.. It is necessary to schedule a perfecting session (touch-up) to complete the process.

TRUST THE PROCESS

(After the procedure)
My lips look bright and feel swollen and tight

My lips appear noticeably darker and feel dry and tight. Ointment will help

My lips have started scabbing and peeling. Continue using ointment

The scabs are almost gone and the color is getting lighter

My lips are completely healed. Color looks light but it reappears within 8 weeks

My lips are perfect after they heal from the touch-up appointment

LIP BLUSH AFTERCARE INSTRUCTIONS

After the procedure, gently blot the area with a clean tissue every 5 minutes until the lymph has stopped

Keep the area dry for 24 hours

Gently wash with aftercare soap twice/day

Apply thin layer of ointment 3 times/day

Do not use washcloth, pick or scratch tattooed area

Do not use steam, sauna, swim for 10 days

Do not put make up on tattoo area for 10 days

No heavy sweaty exercise for 1 week

Avoid the sun for 1 week

PRO TIPS

1

After procedure use ice packs 3-4 times for 15 minutes spurts in first day to reduce swollen

2

Drink from a straw the first few days and avoid salty, spicy food

For the best result we recommend a touch up session be done between 30 and 60 days after the first procedure and a color boost annually.
