

After the initial procedure your brows will appear almost perfect, but this will change. Please be aware of the healing stages to avoid stressing about your brows. Your brows will go through several stages where they will become noticeably darker, then will become scabbed and itchy, and finally will almost disappear (ghosting stage), before finally healing to between 50% and 70% of their original depth. The stages depicted here are what should be expected.

Once you have gone through a full cycle of skin regeneration (4-6 weeks) most, but not all, of the pigment will remain.. It is necessary to schedule a perfecting session (touch-up) to complete the process and make any adjustments to your shape or color if needed.

BE PATIENT & TRUST THE PROCESS

Your brows will look perfect.

Your brows will appear noticeably darker, this is normal

During this time you will develop scabs in the brow area and they will be very itchy.

Your brows will become very light, almost disappear (ghosting stage)

Most of the color will come back. Schedule your perfecting session.

After your touch up your brows will be complete. Trust the process!

EYEBROWS AFTERCARE INSTRUCTIONS

YOU SHOULD

Blot the treated area with a tissue as needed for the first 24 hours to remove lymph.

Keep the area from getting wet aside from cleansing at the sink

Gently wash the treated morning & night with cleanser given to you

Apply a thin layer of recommended ointment 3 times per day.

YOU SHOULDN'T

Use a washcloth on the treated area.

Pick or scratch the treated area.

Use a sauna, swim, or expose to steam for 10 days.

Apply makeup to the treated area for 10 days.

Perform any heavy exercise for 1 week. Avoid sweat on the treated area.

For the best result we recommend a touch up session be done between 6-8wks wks after your first appointment and touch ups yearly or every 2 years.
