

Dear Future Client,

Thank you so much for considering Vitality Electric Vehicle Chargers for your charging needs. Vitality EVC is committed to providing quality, state of the art, cost effective solutions for your residential and commercial solutions. This rapidly growing EV market presents both opportunities and challenges which lends to our commitment to provide a focused approach on ensuring your charging requirements are not only met, but exceeded. We wish to foster a long term, trusted

relationship with you and to assist you whether it be with a home charging station or a bay of chargers for use in a commercial application.

The myriad of credit incentives being offered by state, local and the federal government, as well as utilities provide additional benefits and cost reductions towards purchasing an EV charging system. According to Future Market Insights, the need for Green Energy and the reduction in carbon emissions will catapult the EV charging market to over \$113 billion US Dollars by 2033 and Vitality EVC is with you all the way.

Since businesses have a higher market penetration, they are rapidly deploying electric vehicle charging stations as the trajectory of growth is anticipated to be in tandem with the increasing sales growth of electric vehicles. Further, as the residential market is embracing home EV charging systems, individual residences, apartment complexes and parking garages are following this path. The potential for continued market development as these charging units are less expensive, often do not need professional installation and can receive rebates and incentives shows us all we certainly have a *greener road ahead*.

Vitality EVC will provide units from as compact as 10 Kw to DC Fast Charge units as powerful as 240 Kw or greater. Our ability to be cost competitive will never cause for a compromise in quality. Our charging solutions will afford a cleaner environment, improve public health, and offer employment opportunities to those who become part of the Vitality EVC team. Keep in mind, installing a Vitality EV charging station is working towards a sustainable future, today.

Thank you for your time and consideration, we hope to be welcoming you into our Vitality EVC family.

Sincerely,

Nancy Ruffing
