# COMPANY PROFILE

**Prime Flow Company WLL** is a Bahraini company that specializes in providing engineering solutions to our clients across the Middle East and North Africa. Our team of specialized and experienced engineers is ready, around the clock, to help you find the right solutions to your challenges.

Serving clients ranging from large scale companies to small operations, Prime Flow has a proven history of providing solutions to a myriad of application types from natural gas sweetening trains, to specialized transfer and split valves, to simpler filtration and conditioning applications, to gas and steam turbine spares, to vibration and proximity sensors, and many other types of solutions, we are happy to find solutions and help you optimize your operation.

Representing top suppliers across the globe, the Prime Flow team has access to a collective knowledge of over 300 years of field experience across a varying range of fields like power generation, oil & gas, refining, gas sweetening, industry and heavy industry, agriculture, aquaculture, and many other fields. No application is outside the scope of the specializations that Prime Flow brings to the table.

# COMPANY PROFILE

## Services

### Consultancy

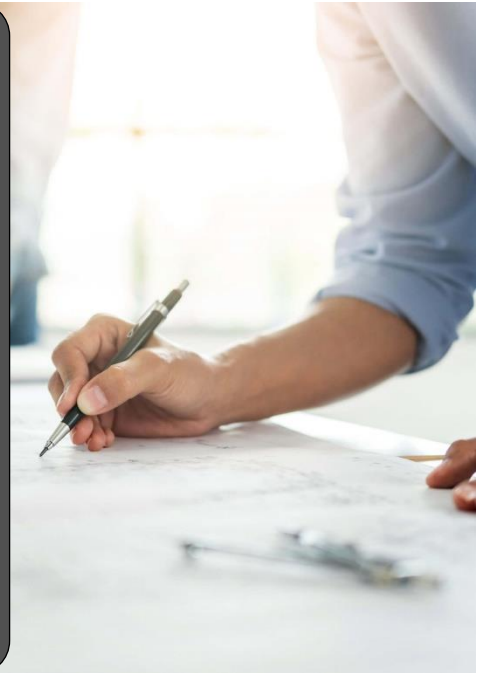

Prime Flow provides expert consultation on industrial and oil & gas applications. This is established either through the expertise of the team or through external consultants.

### Packaged Solutions

Prime Flow provides complete package solutions for different challenges and applications that require unique solutions as well as solving problems with existing installations. This includes design solutions, as well as equipment packages.

### Spare Part and Consumable Supply

Prime Flow represents major manufacturers of consumables and spare parts for existing installations and equipment for existing requirements.

## MARKET SEGMENTS

- Oil & Gas
- Heavy Industry
- Power Generation
- Petrochemicals
- Off-Shore Operation
- Water Treatment & Purification
- Mining
- Aquaculture
- Agriculture

## Prime Flow Offering

### Filtration & Conditioning

Prime Flow has a wealth of experience and works closely with The Hilliard Corporation on filtration and conditioning projects. The Hilliard Corporation has been a leader in the field of filtration and conditioning for the past 115 years, and continues to develop new products and solutions ahead of any other filtration company globally.

The offering includes simple mechanical filtration application, and covers the spectrum all the way through more specialized applications like acid and varnish remediation, as well as Hilco 6-way and split valves.

### Turbine Spares

Prime Flow works closely with Prime Turbine Parts in the USA. Prime Turbine Parts is composed of a team of gas and steam turbine specialists with a combined experience of over 100 years in the field.

PTP can provide spare parts for any section of the turbine, either as drop-in replacements for existing parts or spares directly acquired from the suppliers to the OEMs.

The offering covers GE gas and steam turbines, as well as Westinghouse turbines.

# COMPANY PROFILE

## Desulfurization and Deodorization

Prime Flow works with several specialized companies across the globe in the field of desulfurization and deodorization. The offering ranges from sorbent and catalyst supply to complete custom system designs.

Prime Flow's highly specialized team is capable of tackling any problems relating to managing  $H_2S$ , mercaptans, and other contaminants and processes that need to be addressed for new and established production lines.

The systems that can be offered range from small production and processing lines to complete production line scale systems with reliable production and operational capacity.

## Vibration & Proximity Sensors and Systems

Prime Flow offers a complete suite of products for condition monitoring applications for both critical and non-critical applications. This includes vibration and proximity sensors, transmitters, switches, signal conditioning systems, signal monitoring software, cabling, and boxes.

This offering also includes different operating conditions and environments, as well as having the capability to design custom systems based on the needs of the application, if needed.

Prime Flow also has the ability to offer drop-in replacements for other companies like Bently Nevada. Prime Flow can also offer certification courses and training for different condition monitoring needs.

# COMPANY PROFILE

## Specialized Valves

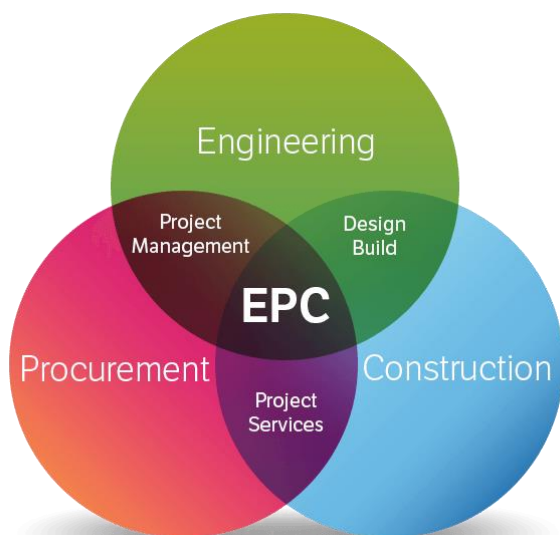

Prime Flow works with several reputed manufacturers and suppliers of specialized valves. This includes off-the-shelf products as well as customized valving solutions.

All applications from simple 6-way valves and ball valves, to more complex distribution valve configurations and actuated valving can be custom designed to your needs.

Many of the valves can also be offered in a split configuration for operations that require that.

## EPC and Turn-key Solutions

Prime Flow offers EPC and turn-key solutions for all types of applications. Our strength is our ability to combine the breadth of knowledge and experience within our team to provide you with an optimized solution to reduce your operating and capital expenses, while maintaining the highest quality standards and operational integrity.

Our solutions are geared towards your objectives and ensuring that you meet your goals, while offering our services and expertise after commissioning and hand-over for any updated objectives or new developments we can assist you with.
