

MODEL # 499 ABOVE GROUND
POOL FENCE SYSTEM

PLEASE READ ENTIRE INSTRUCTION PRIOR TO
ASSEMBLY & INSTALLATION OF FENCE TO FAMILIARIZE
YOURSELF WITH COMPONENTS & PROCEDURES

REMEMBER - NOTHING REPLACES PARENTAL
SUPERVISION AROUND A SWIMMING POOL

TOOLS REQUIRED

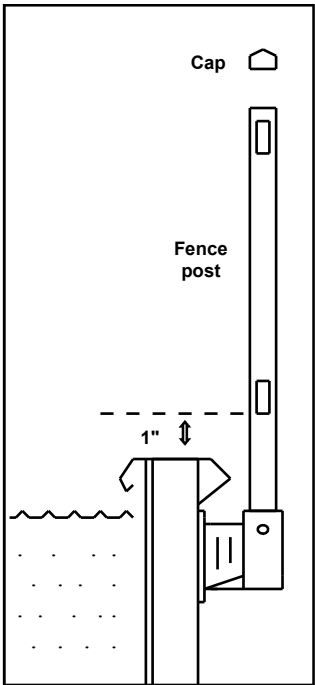

CAUTION WHEN USING POWER
TOOLS AROUND WATER

Mount post brackets to vertical uprights of pool as shown (Figure 1-1). We recommend that the brackets be mounted just beneath top rail connector caps to maximize strength of fence. Place bracket base plumb against pool post / upright and mark the location of the mounting screws (2 of #14 x 1" screws with washers (1042) for extra strength). The rear of the bracket can be trimmed if the upright is not level or has a center ridge. Predrill 5/32" holes. Mount post bracket. **MAKE CERTAIN NOT TO OVERTIGHTEN SCREWS AS IT MAY CAUSE HOLES TO STRIP.** Insert fence post into bracket making certain that the precut rail hole for the bottom rail of fence is no more than 1" above top rail of pool. The post can be cut down if necessary. Predrill a 1/4" hole through the bracket and post and secure using a 1/4 x 2" bolt and nut. Repeat for all brackets and fence posts around your pool (see Figure 1-1).

Plumb & Secure

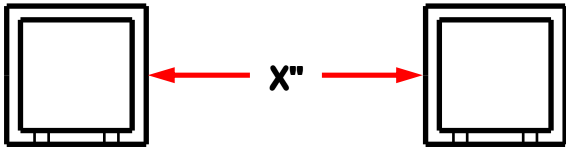

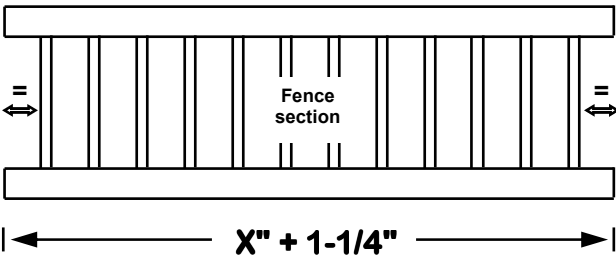

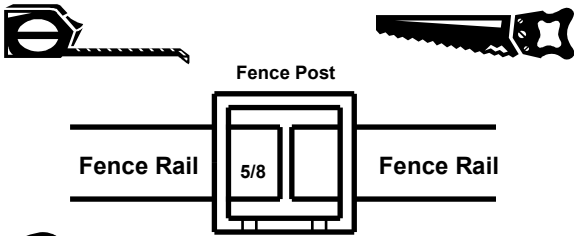

Figure 1-2

Measure distance between fence posts and add 1-1/4"
(Top view of two fence posts)

Determine the length of each fence section (Figure 1-2). Measure the distance between fence posts and add 1-1/4". The end of each fence rail should protrude 5/8" inside each fence post. Cut fence rails accordingly using either a hand or power saw. Balance the distance from the last picket to the fence post on both ends of the section so the final installation will look neat. Tip: cut both fence rails together / at once so that the pickets will be vertically plumb with the posts for a neat appearance. Fit bottom rail in place and balance each end so picket spacing is equal. Insert fence pickets. Fit top rail over pickets and into fence posts. Measure, cut and assemble for each individual fence section as sections may vary in length around your pool.

Top view
of fence

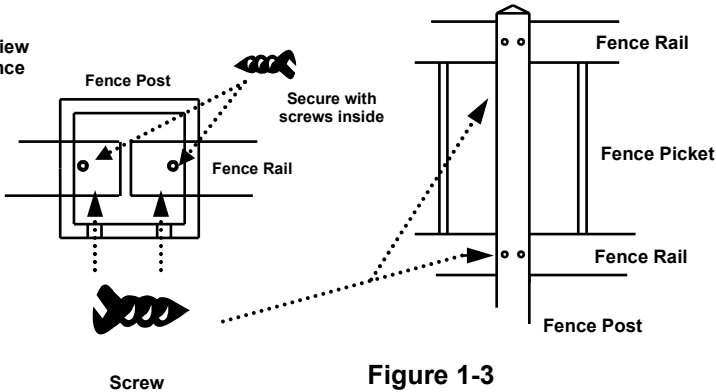

Figure 1-3

Secure ends of fence sections using the small 3/4" screws provided (see Figure 1-3). Make certain that the screws catch the rails on the inside of the posts. Failure to do so may result in a fence section coming apart. For additional security, use a single screw through top of post opening into each rail end. This will not allow rails to pull away from posts. Repeat for each post and section. Fit post caps onto tops of posts. Check to be sure that entire installation is secure.

Connecting the fence to our "Slide-Lock" Ladder, one of our Stair
Systems or a deck ? Ask about our CONNECTOR KITS !
