# Company Values

---

At Vert Global, we pride ourselves on being market leaders in the exterior maintenance and façade refurbishment space through our efficient methods of project delivery.

Structured in such a way that we can easily provide our clients with turn-key solutions, we flourish by taking your building/asset issues and returning them to you as solutions that now add value to the building/asset.

Project Management is one of our key services. A structured approach aids with the inception of any project, especially when it comes to the tendering and planning stages. Once a project has been initiated, we then coordinate the tender process on your behalf to engage all required trades, followed by close management of all stages to see the successful delivery of all project items.

Honesty and integrity are our main core values and are expressed throughout all roles within our business.

We believe in the transparency of all items with our clients throughout the delivery of their projects via regular progression updates.

## Our Mission

---

We believe having a 'WHY' in life is imperative to remain grounded and on track throughout the journey.

Vert Global exists to preserve and maintain assets of all shapes and sizes, ensuring their longevity and quality of life while they are in existence.

In doing so, we operate to treat all parties fairly and trade ethically.

# Services

---

- **Project Management**
  - Turn-key solutions from management of tendering stages through to practical completion and all the necessary processes in between to successfully deliver your projects.
- **Rope Access Maintenance**
  - Repair works ranging from concrete remediation to sealant replacement via the use of Rope Access provisions.
- **Façade Cleaning**
  - Encompassing window cleaning, building wash-downs, car-park cleaning, roof cleaning and more.
- **Cladding Replacement**
  - Removal and replacement of combustible cladding.
- **Steel Restoration**
  - Refurbishment and replacement of structural steel elements where corrosion issues occur.
- **Concrete & Structural Repairs**
  - Concrete spall repairs, crack injection, structural repairs and NDT.
- **Height Safety Systems & Access Platforms**
  - Anchor systems for rope access or working at heights, alongside platform design and installation at roof level or within plant areas.

# Services

---

## ➤ Façade and Building Refurbishment

## ➤ Industrial and Commercial Painting & Coatings

- Refurbishment and protective coating works in marine or harsh environments.
- Internal and external coatings to commercial and residential properties, encompassing repainting and new applications both internally and externally.

# Health & Safety Policies

---

Health & Safety in the workplace is a huge consideration and is taken seriously at Vert Global.

Every site has a Site-Specific Safety Plan, which will encompass all safety procedures, inductions, evacuation points, first-aid information and any notable hazards or risks associated with the site and relative tasks.

Designated Site Managers are all trained in first-aid and personally complete inductions for any tradespeople who are new to the site.

We have incident and near-miss procedures in place to record and ensure these are monitored for regular assessment and improvements towards creating a safer workplace.

Our annual training program ensures our in-house staff are continually upskilling and are refreshing their industry certifications. Any sub-contractors also provide their certifications for site-specific tasks prior to any work commencement during our rigorous contractor induction processes.

While we strive to maintain a safe workplace in all aspects, we are also very mindful of the environment. Our considerations towards protecting the environment are ingrained into all policies and procedures.

# Environmental Commitment

---

Environmental conservation is very important within the industries we operate in.

The way in which we source, handle and dispose of materials all has an impact on the environment in one way or another.

As a company, we strive to work as a team to ensure materials are sourced locally and ethically. Work methods are compiled to align with environmental longevity, as well as ensuring the most appropriate disposal methods are in place and complied with for respective materials.

Environmental policies are in place and are regularly reviewed to ensure further considerations have not been overlooked and to ensure legislative compliance is met.

# Quality Assurance

---

Quality Assurance (QA) is imperative for the successful delivery of our projects. Our strict QA procedures ensure regular site audits are conducted and hold points are set through all projects.

Compliance with our annual training plan aids with maintaining a high level of staff competency and ensures a high level of workmanship.

We carefully select and partner with manufacturers and suppliers of high-quality materials, allowing our teams to deliver professional results.

Regular reviews of our QA procedures are undertaken to continually improve this key aspect of our business.
