

We are looking for Senior Manager – Quality for a packaging solution company based out at Pithampur. This position will report to Plant Head. The aspirant will be responsible for monitoring, auditing, and implementing quality & compliance standards, initiatives and analysis and managing the calibration process across all teams. We are looking for an effective communicator who will Lead, by example, and support the continuous improvement process. This position will facilitate the development of an open and productive culture where people take pride & responsibility in what they do. The aspirant will continually inform and involve all relevant personnel in the exchange of information necessary to ensure alignment to current and future objectives to meet quality goals.

Key Words:

Quality Assurance, Quality Control, Corrugated Boxes, Wooden Packaging, Continuous Improvement, Quality System, ISO Standards, and Total Productive Maintenance (TPM)

Education Qualification:

- **B.E./B. Tech** in Mechanical Engineering or B.SC in Chemistry
- Any advance certification or diploma in packaging will be an added advantage

Key Result Areas:

- Set up an effective Quality Management System
- Responsible for defining QA strategy, approach and execution for the plant
- Implementing various quality standards and techniques for improving the project operations along with cost savings
- Taking care of ISO documentation, customer audit and work on plant's key performance indicators.
- Establish programs to identify non-conformances and implement corrections and improvements
- Collaborate with Purchasing to develop and implement a supplier management strategy.
- Assess and monitor supplier capabilities and quality to ensure desired levels of performance. Work with supplier to resolve any incoming component quality problems.
- Collaborate with Engineering and R & D team on new product development and design review for quality/reliability issues.
- Lead responsibilities and act as the owner for the risk analysis throughout the product life cycle, both in the design process and after delivery of the products
- Formulate quality assurance policy for all phases of the manufacturing process including incoming components, work in process and finished goods.
- Make appropriate recommendations and implement quality initiatives to improve and drive execution of our internal quality performance.
- Maintain internal controls to assure defect avoidance rather than defect identification
- Analyze customer returns and provide lessons learned to Manufacturing and Development to continuously improve our product quality.
- Coordinate practices required by customers including problem resolution, obtainment of temporary deviations, and establishment of acceptance criteria.
- Represent the company in both customer and agency audits

Requirement of prior successful experiences:

- Minimum 8 years of Experience from Tertiary sector packaging company
- Candidates experienced from pharmaceutical industries who worked on implementation of QMS of global standards can also apply
- Previous experience and demonstrated competency in Quality Management Systems are must
- Broad technical knowledge in the areas of manufacturing processes, lean concepts, quality, and plant engineering.
- Experience with quality improvement tools and techniques (i.e., Lean, Six Sigma, Statistical Process Control, and Failure Mode & Effects Analysis).
- Demonstrated leadership, project management, and facilitation and problem-solving skills.
