

## ProPPG Wing Bag Folding

Fold the bag in half by holding the draw string outlet to define the folding point. This ensures that bulk is reduced when making later folds. Make sure the outside edges are neatly arranged on top of each other.

Fold in half again and keep the edges together neatly. Make sure the fabric at the pointed end is neatly folded.

Fold in half again. It seems to get easier now and also squeeze air out.

Fold in half again 2 more times until it looks like this. Make sure the handles are flat and not twisted. This ensures that bulk is reduced when rolling the bag up.

## ProPPG Wing Bag Folding

Fold the tip over as shown and squeeze out any air.

Fold over again making sure that the folds at the top don't open out. Now tightly roll up the bag from the yellow end making sure that the bag stays neatly folded.

Place the velcro strap around the bag and tighten it up. An assistant is useful at this stage so that your tightly rolled up bag doesn't unroll.
