

No Spy AI

Private AI. Built for You, By You. Built for Compliance.

The false choice of modern enterprise AI.

The Mandate
to **Innovate**

The Mandate
to **Protect**

Today's leaders are forced into an impossible compromise. Adopting AI shouldn't mean **surrendering privacy**, yet the current market demands leaders choose between falling behind competitors on innovation or risking **proprietary data in the cloud**.

Intelligence does not
require cloud exposure.

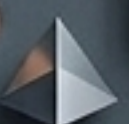

Air-Tight AI

We build **fully self-contained** AI systems
that run entirely **offline**.

No internet.
No cloud.
No risk.

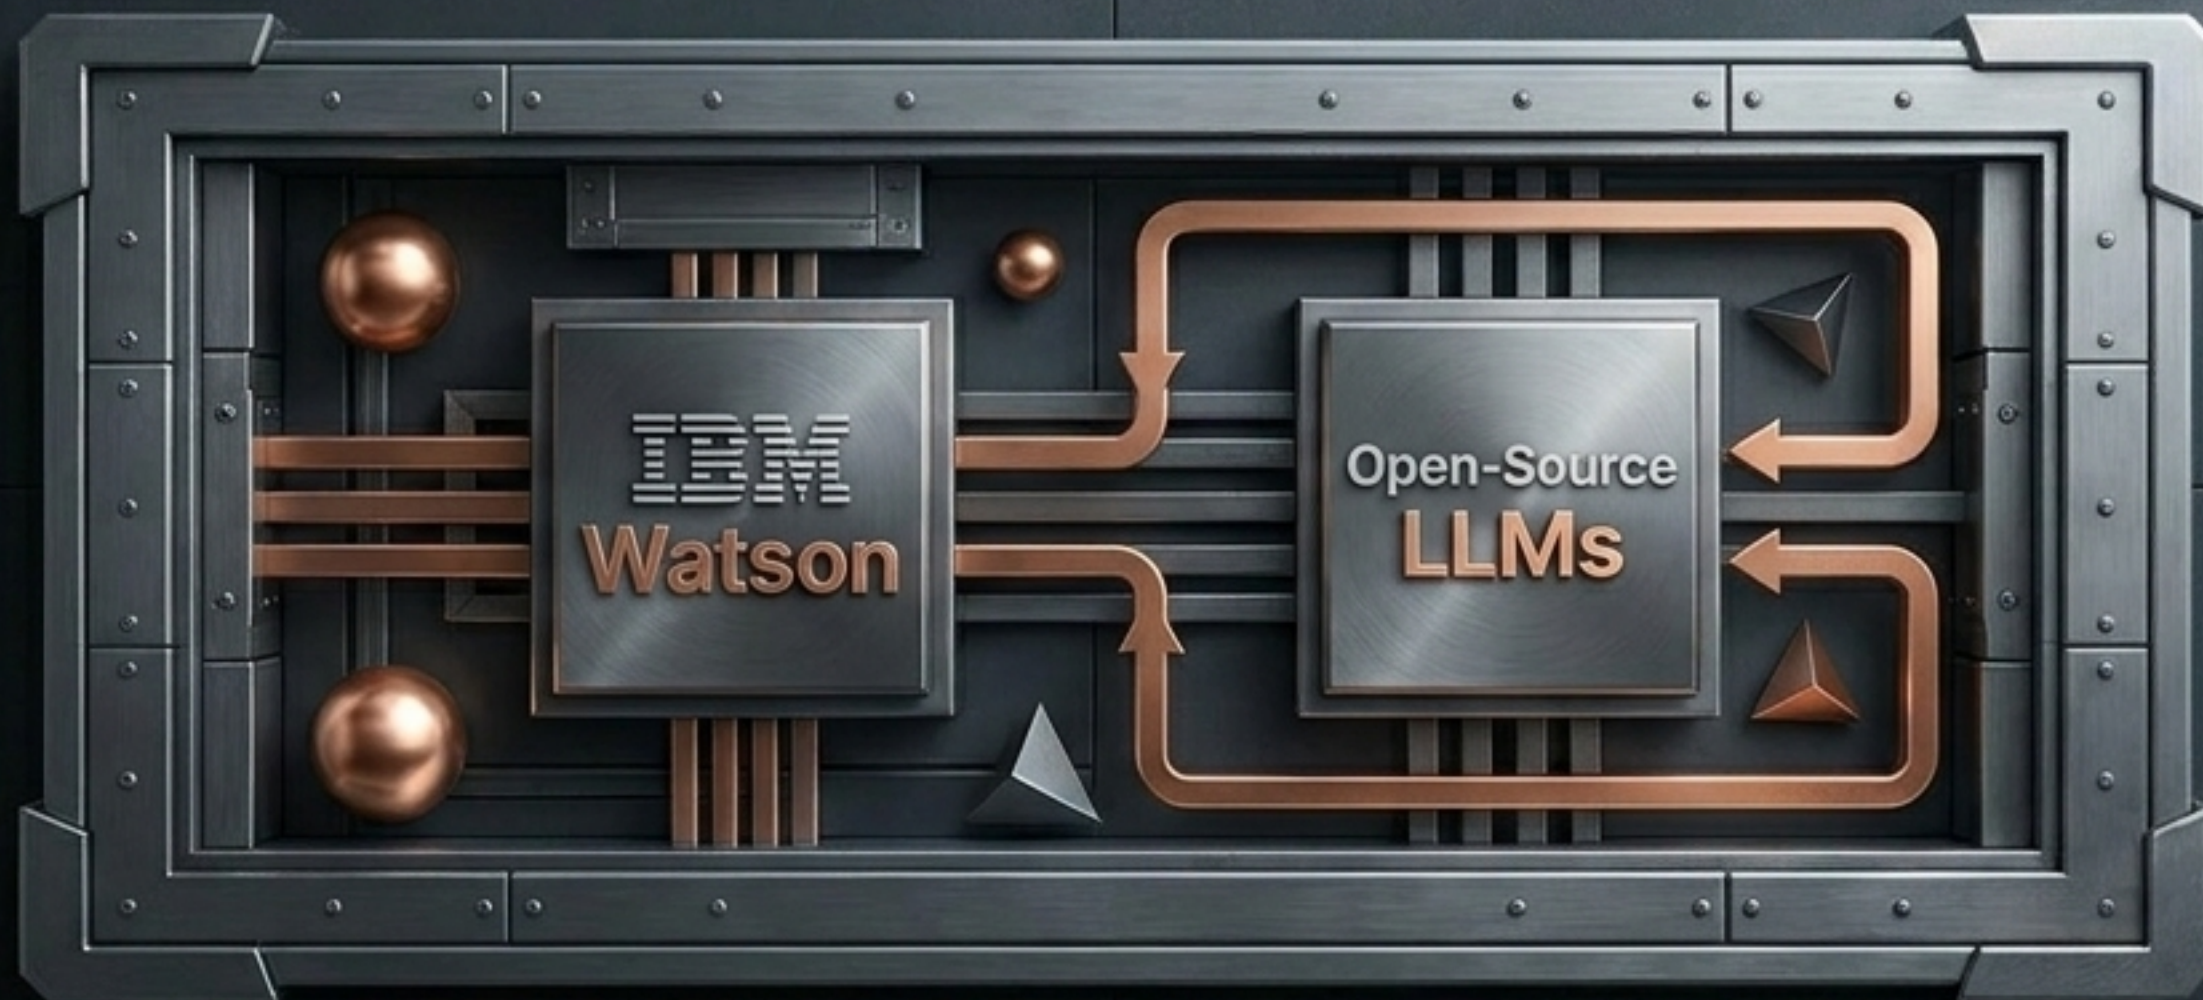

Your data stays entirely
on-site and strictly
under your control.

Realigning AI with strict enterprise security protocols.

	Traditional Cloud AI	No Spy AI
Data Location	External Servers 	Strictly On-Premises 
Connectivity	Exposed to the Web 	100% Air-Gapped 
Compliance Status	Shared Responsibility / Variable 	Absolute Local Control 
Overhead	High Complexity 	Fully Managed 

For organizations with architectures that prevent fully offline deployment, **secure custom cloud options** tailored to unique compliance needs are also available.

World-class intelligence, entirely under local control.

Each unit is built on **enterprise-grade hardware** and comes preloaded with trusted, top-tier models like **IBM Watson** and powerful **open-source LLMs**. Achieve enterprise-grade AI capability without the massive cost or complexity of traditional setups.

A rental-first model to de-risk enterprise adoption

Step 1: Try Before You Commit

A low barrier to entry to prove ROI before permanent capital expenditure

Step 2: Test & Evolve

Absolute flexibility to adapt the hardware and software architecture to your specific regulatory and security requirements

Step 3: Scale Securely

Expand the setup seamlessly over time as organizational adoption grows

White-glove deployment from hardware to ongoing maintenance.

We handle the full rollout and complexity so your internal teams don't have to.

Powered by infrastructure experts for demanding environments.

No Spy AI is powered by the expertise of Tashman Tech. We are the team businesses call for 3 AM disaster recovery and full server room rebuilds.

We solve the complex problems others walk away from.

When privacy, compliance, and performance all matter, we get it done—securely, efficiently, and enthusiastically.

Pursue innovation with absolute accountability.

Secure your private AI infrastructure today.
