

PAIROT

VOICECONTROL FOR YOUR HOME

With Pairot you can make the KNX installation of every home available for Apple HomeKit, Amazon Alexa and Google Assistant. Pairot acts as a bridge and allows you to use an Apple device, the Amazon Echo and Google Home to control up to 150 components in your home and check the current status. This allows easy voice commands to control, for instance, your lights or thermostat. The consumer retail price of the Pairot device is € 595,- ex. VAT and provides certified support for all three voice assistants. There are no subscription or license fees.

EASY TO SET UP

Pairot is easy to set up. In the online environment 'My xxter' it is possible to import the KNX-project from ETS. Pairot is a DIN rail device of 4 MW wide and is to be connected to the home network, the KNX bus and a 5-36 VDC power supply. When the configuration is loaded onto the device it can be paired with the voice assistant.
