FinLitX DAO
Decentralized Autonomous Organization

FinlitX DAO is education for a digital world. FinLitX combines financial literacy and education curriculum with gamification, autonomous scoring, reduces school costs and includes a crypto-currency reward system.

Students and consumers are incentivized to achieve success because the learning playing field is leveled, and achievement is rewarded.

The FinLitX education ecosystem is supported by machine learning, artificial intelligence, smart contracts and blockchain designed to simplify learning and empower students to take control of their own education pathway and future. Users play the FinLitX gamified learning system and earn points which are traded for money, gifts and crypto currency such as the RTPX, FinLitX and Bitcoin. Crypto rewards may be spent for tuition, room and board, sundries, food and general merchandise.
