

BRAIN GAME LS INC. ANNOUNCES FINLITX, A REVOLUTIONARY FINANCIAL LITERACY-TEACHING APP VIA TOKENOMICS

Posted on April 25, 2022

“Our mission is to empower, educate and provide the tools that will take our education landscape into the next digital age. Financial literacy is important and a critical topic.” – D. Alexis Samuels

FinLitX utilizes gamification and cryptocurrency to open doors to financial literacy

CEO of FinLitX, D. Alexis Samuels, is pleased to announce the opportunity to ‘Play. Learn. Achieve.’ financial literacy in a digital world per a new and modernized method of teaching.

FinLitX is an autonomous application that promotes financial literacy, curated with gamification, artificial intelligence, and an Ethereum-RTPx crypto coin, sans a human monitor. The advanced A.I. marks player vulnerabilities and, in utilizing machine learning, virtual reality, competition, repetition, and rewards, instills confidence and values in students. Youth immediately see results in terms of better grades, better self-esteem, and the hope of achieving a higher net worth.

Some 45 states mandate that High School students learn personal finance in part **or** for a full curriculum credit before graduation. The FinLitX app provides an online solution for schools and universities everywhere.

The FinLitX platform prepares students for ‘real life’ by guiding them along all methods of income and how to maintain funds, most not covered in schools. The learning platform comes equipped with accredited virtual coursework that supports state mandates for student learning before graduation and, for finishing the course, students are rewarded with an RTPx (Road To Prosperity) token. The hope for Samuels and Co. is that the coin can then be used for things like student loan payments, room-and-board, tuition, and other education-centered necessities. Additional features include access to scholarships, 529 plans, employment referral, investment plans and mentorship.

“Our mission is to empower, educate and provide the tools that will take our education landscape into the next digital age and solve many of the social-economic challenges facing black and brown communities, and people everywhere. Financial literacy is important and a critical topic, but students should also be taught about cryptocurrencies and NFTs as well,” said Samuels. “Most people understand the basics of being financially literate, but only apply it to things like credit scores. These are also people living paycheck-to-paycheck and don’t have savings. We teach financial literacy with a focus on applying it to a digital world.”

Those educational institutions eager to partner with FinLitX can find more information about the company and its virtual classes at <https://finlitx.com/>

About D. Alexis Samuels

D. Alexis Samuels, the founder of FinLitX, is on a mission to revolutionize the way that financial literacy is taught and understood. Through AI and reward-based systems, the FinLitX system has already helped thousands and the new software is bringing knowledge of this much-needed skill into the digital age!
