LGB Tours Plans Trips for 2022

Narrow Gauge Paradise • LGB Tours has arranged tempting trips for Fall 2022.

One trip visits the French Riviera and Spain from Sept. 1 to 12, 2022. Train travel ranges from the Train des Pignes (Pine Cone Train), a 1-meter gauge railway, to the Ligne de Cerdagne, often called "The Little Yellow Train" of the Pyrenees Mountains, an historic metergauge electric railway, and includes steam excursions and a rail-bike line.

fount Washington Cog Railway Thoto by Roller Coaster Philosophy Steative Commons

Later in September, enjoy Indian Summer in the Northeast. Travel from Boston MA to Washington DC between Sept. 25 and Oct. 6, 2022. You'll ride the Mt. Washington Cog Railway, the Amtrak Vermonter, the Cass Scenic Railroad and more while admiring the autumn leaves.

The Railroad Garden Exhibit in the Botanic Garden • ABQ BioPark

The Railroad Garden at the ABQ BioPark in Albuquerque, New Mexico

By Vance Bass Photos by Fred Prince unless otherwise noted

The ABQ BioPark is a gem along Albuquerque's Rio Grande, featuring a nationally acclaimed botanic garden, fishing beach, zoo and aquarium. One of the botanic garden's many notable features is a large-scale train layout, the Railroad Garden, which was installed in 1999 by the New Mexico Garden RailRoaders (NMGRR).

The railroad originally featured 400 feet of track, but has expanded over the years to 1,400 feet. With two main lines in a C-shaped dogbone arrangement and several smaller operational sections, volunteers can operate seven trains at once. The trains are always chugging through the landscape and then disappearing around the bend, passing towns and industries along the way.

Dramatic bridges span water features and dry creeks throughout the layout.

Mainlines converge; of course there's a town.

S curves add interest.

Visitors walk along paths to follow the trains around the Railroad Garden.

The terrain is fairly level along the line, but slopes slightly from back to front, down to an artificial creek. This provides visitors a good view of the tracks and the pleasant sound of running water. The creek water recirculates from a lake at the lower end and provides places where some dramatic bridges add to the visual appeal.

In addition to the main lines, the exhibit also features interactive loops. Thomas the Tank Engine and Percy sit ready on a small, double-track loop between the main tracks and the split rail fence. When a visitor pushes the big red button, Thomas and Percy make a circuit of the oval in opposite directions. This feature is so popular that the BioPark has had to replace the button many times after it wore out! Around the corner, there is a similar user-activated loop with a logging train. (Alas, both buttons had to be removed during the COVID pandemic, to be replaced by automatic timers.)

The trains are operated by ABQ BioPark employee Dustin Foster and NMGRR volunteers. There are several park-owned trains in residence, and the volunteers often

Thomas (and friends) have their own tracks and station.

Terrarium cars transport insects that visitors can see at the Bugarium exhibit.

Dinosaurs ride through the desert as Percy circles past.

A spider-web covered loco pulls the Heebie Jeebies Halloween special.

A circus train is one of many consists, historical and fanciful, sure to entertain.

Zoo animals (and well known characters) occasionally get out for train rides.

bring their own trains, so there is always a variety of trains rolling by for visitors. (And it's a great opportunity for NMGRR members to run on a more extensive line than they have in their own gardens.)

It might seem like such a large line would be a lot of trouble. Dustin says his daily routine starts simply with buffing the rails and clearing twigs and leaves from the cottonwood trees. He avoids automated track cleaners because of the extra wear they can put on the rails. Volunteers help with occasional track maintenance.

Albuquerque gets an average of 278 days of annual sun, so it's almost always good running weather. But neither rain nor snow stop the trains. They run all day, every day the park is open. (It is closed on Mondays and Tuesdays, Thanksgiving, Christmas and New Year's Day.)

Being open nearly all the time requires some security, of course. Volunteers go through a background check and training on the operation of the railroad. A lockable control cabinet keeps the electronics secure and out of the weather. After hours, equipment is stored in a large shed at the south end of the layout.

Always have your safety equipment and trained crews near by.

Giant rock work frames a stop served by this Santa Fe Warbonnet consist.

Santa appears on an adobe home roof, part of festive seasonal additions.

European and American steam locomotives come to town.

Mainlines run parallel, but at different heights, adding interest to the layout.

Trains can be set up and stored at night on tracks down the center of the storage shed. Long work counters facilitate repairs and seasonal changes.

Twice a year, NMGRR also sets up a temporary exhibit in the shady Ceremonial Garden, making a jampacked carnival with lots of trains running simultaneously in a very dense space. In an adjacent walled garden, the live steamers set up a loop on folding tables to show off their little dragons.

Every December, the BioPark presents River of Lights in the evenings. This event features huge sculptures made of steel frames covered with rope lights, often with animated movements. Visitors bundle up and stroll through the park, looking at the lights and listening to carolers. The River of Lights trains often feature seasonal themes, too: gondolas carrying toys, or flat cars bearing luminarias (perforated bags with candles inside, in metal miniatures on the train). These are always big hits with visitors.

Thanks to the foresight of BioPark directors in the '90s, garden trains have become an integral part of the Botanic Garden experience.

LUB CORNE

Curated by Bill Derville, Past President Rose City Garden Railway Society • Portland, Oregon

Clubs are often contacted by both club members and the public who want to sell their G-Scale railroad and equipment and do not want the hassle of advertising one piece at a time and shipping on eBay. In the September/October issue (downloadable at GRNews.org), I discussed clubs buying track from estates or dismantled layouts and reselling it to club members to start new layouts or to expand.

If the entire railroad is to be sold, estates and individuals often turn to companies that regularly buy entire railroads, which they then advertise and sell. One of our advertisers, TRAINZ.com, is one of those companies. They make it easy.

Some who wish to sell it themselves will buy a table at a local railroad swap meet. For smaller lists, clubs may allow members to list items for sale in their newsletter, with a note to contact the seller directly.

Our Rose City club holds an annual club auction (live and silent) that helps people sell equipment while members can acquire items at good prices. We usually hold the silent auction during our club annual meeting where officers are elected and club business is discussed. We

Successful Bidder	34 Pay RCGRS:	\$ 260

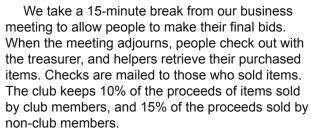

rent a building with two large rooms, one for our potluck lunch and business meeting and the other for the auction. We set up folding tables to display the equipment for sale. Auction items may be brought in by sellers, or sometimes collected and stored until the annual meeting. There are usually over 100 items in our silent auctions.

Our treasurer creates a spreadsheet of all items in the auction (example below) on his laptop. Once the auction closes, helpers bring the bid sheets to the treasurer who records the winning bid and bidder number on the spreadsheet. Items are then grouped by successful bidder number, making checkout faster. Yes, the treasurer and helpers miss the last part of the meeting.

This provides several hundred dollars of additional revenue for our club each year, helping us keep membership dues at only \$15 per family. At that rate, cost of membership is no longer a reason not to join.

Share your ideas with me by email at bill@derville4.com and your experience may be in a future column.

A Variety of Pop Up G-Scale Railroad Displays

Clubs around the country have been setting up G-Scale train displays at model train shows, railroad and aviation museums, nurseries, car dealerships, and many more locations sharing our hobby with anyone who stops to look. We collected some examples to give you ideas for your own display.

Santa Clarita Valley GRC set up a table top display during Travel Town Depot Day in Griffith Park, Los Angeles CA.

Minnesota GRS set up at the Great Train Show at Canterbury Downs in Shakopee MN, with a great double helix to catch the eye.

Georgia GRS put their elevated track to use in a floor display at the Piedmont Trains Show in Cartersville GA.

WE HAVE GONDOLAS, FLAT CARS, BOX CARS, CABOOSES FOR EGGLINERS

-- By Richard Murray

BOTANICAL NAME: *Picea abies* 'Echiniformis' COMMON NAME: Hedgehog Norway spruce, Echiniformis white spruce

USDA HARDINESS Zone: 3 (down to -40° F)

Echiniformis' parent, the Norway spruce, grows throughout Europe from Finland in the northwest and Poland to the east. It also grows in the mountains of central Europe. The northern limit is the arctic in Norway. Its eastern limit is hard to define, due to extensive hybridization with the Siberian spruce, but it is usually given as the Ural Mountains.

Echiniformis is a very old cultivar that was originally listed in the early 1870s at a nursery in Scotland. Although some say that its origin is unknown, others say that it originated as a witch's broom. It grows as a dense bun. It is an evergreen conifer and has blue green foliage.

Echiniformis is propagated by grafting, and it does not set seed. It is a slow growing neat plant, growing about 1" per year and, therefore, is classified as a miniature. After about 10 years it is usually about 15" tall and about 18" wide. The plant in the photo is about 15 years old and seems to fit the average growth pattern.

Echiniformis' prickly needles gives the plant its common name, Hedgehog spruce. The plant's name comes from the Greek, echinus, meaning sea urchin, which looks like a hedgehog.

The plant is somewhat drought tolerant, and should not be overwatered according to some in the literature. However, I water all three of mine two to three times a week and they are all doing well. It can tolerate a wide range of soils, from poor soil to rich, well-drained soil. It likes full or part sun and does well in windy areas.

This compact plant makes a great addition to a rock garden or to a garden railroad. In fact, it should be considered for all garden railroads. It can even be kept in a container. It is a low maintenance conifer and is easily grown.

FOX HOLLOW RAILROAD

By Becky Herzog

Fox Hollow Railroad was named for the female fox that I feed each night on our front porch when the babies arrive each spring. I give them a chicken thigh cut up into small pieces.

The railroad all started in early summer of 2018 when I sent Don an eviction notice for his raised vegetable garden. It read approximately "Plant your damn vegetables somewhere else. You have two garden railroad layouts and I want my own."

The raised bed was only 11 by 14 feet which was enough room for a battery-powered railroad. So, I asked Don and three members of the Redwood Empire Garden Railway Society—Ken Brody, Doug Lodge, and Terry Strom—to build it which they did in five afternoons.

> Ken drew up the plan, track was laid down and work began. Ken and Doug did the mountains and tunnel while Terry worked on the viaduct that he resurrected from one of Don's previous layouts. Don picked the rock from one of the many piles that he had purchased for his layouts and then planted the trees.

Now that my layout was basically completed, it was time for me to put on the finishing touches that I had been thinking about for a long time. I wanted a school, a playground, a dog park, and a farm. And, in the far corner, I wanted a winter scene complete with skiers, a sleigh ride and other goodies.

Don has a warehouse full of trains and accessories which I carefully perused and found multiple items for my railroad. And, I did not really mind going to the miniature shop and purchasing whatever else that I wanted just like he goes to the train store. I put out my accessories on the layout each spring and store them away in the fall, changing scenes somewhat each season. Don had one of his engines converted to battery power and with sound for me to use along with several cars. All in all, it has been a fun experience and shows how much can be built in a small space.

A Variety of Pop Up G-Scale Railroad Displays

A temporary club display can range from loops on the ground to multi-level, multi-train displays. Christmas displays running throughout the month of December warrant more "permanence" than a single day or weekend show.

Redwood Empire GRS built a Christmas display on a flat bed trailer for a 2018 party a member held for neighbors who lost homes in a wildfire.

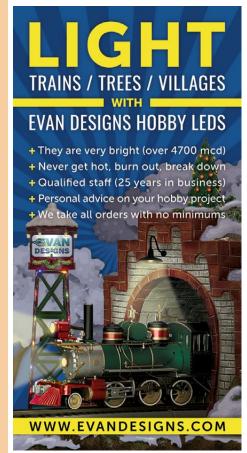

A different Main Street Holiday Train display at EnterTrainment Junction is built by Greater Cincinnati GRS & Miami Valley GRS club members each year.

MORE ADVENTURES IN 3D PRINTING

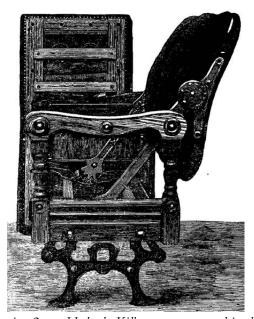

Vance Bass

There's a fellow in a ⁷/8" scale discussion group I follow who's scratchbuilding a model of a Maine 2-foot gauge combine. He noted that making the chairs was going to be a huge pain, since none are commercially available, so I thought I'd give it a try in 3D CAD. The first one I did was based on a D&RG drawing from 1880, but it was the wrong style for his model. Try again! The second style is based on a drawing in the 1888 Car Builder's Dictionary, and is just like the ones in the prototype car. Success! But it's not a magic wand – each chair takes about 8 hours to print.

Version 1 − based on a 1880 D&RG drawing

Version 2 – a Hale & Kilburn seat, as used in the Monson Railroad combine, from the 1888 Car Builder's Dictionary

Plastic Wood

(No trees were harmed in today's presentation)

Photos and article by Don Rose

If you look through any collection of photos from the early steam era, most of the freight cars and passenger cars were wood construction. Even after the early diesel engines started to show up, wood cars were still around in significant numbers. The narrow gauge lines started with wooden cars and finished with wooden cars.

As a narrow gauge modeler I build mostly wooden cars—out of plastic. You might not want to build a plastic wood freight car but you probably have a spot on your railroad for a small shed or other little wooden building. So some "plastic lumber" might be just what you need.

Turning styrene into "plastic wood" is very easy. I made a little tool out of some old saber saw blades. You want a variety of scratches of different depths to give some nice "grain" to the plastic.

I use plastic from both Evergreen Styrene and Plastruct. It comes is numerous dimensions and the pieces can be easily laminated to give any size board or beam you need. A few swipes with a saw blade and the joint between the pieces disappears.

If the finish is too rough you can smooth it down a little with an old Xacto saw blade.

Page 💽

Continued on next page.

June 2021

Continued from previous page.

End grain can be added using the saw blades. Here I am forming the pilot end beam for a locomotive

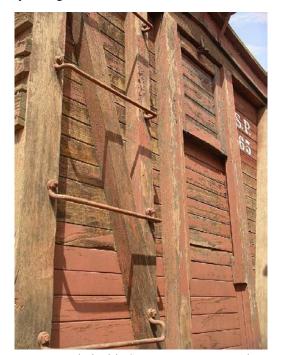

It is not necessary to use individual boards. This box car sheet siding *(below)* was lightly scribed with an Xacto saw blade with some of the boards given a little extra scratching to create a difference in textures.

Knot holes or not holes? Small drill bits can be used to poke a few knot holes in your plastic wood. I don't carve a lot of knot holes in my "lumber." The heyday of wooden car building corresponded to the heyday of the lumber industry. Tens of thousands of board feet of lumber were cut from old growth timber. Railroad car builders used only the best wood. It was all straight grained and almost completely knot free. If a board had a warp or a knot it was thrown out and a perfect board selected. The stuff that the lumber yards sell today as prime grade lumber would have gone to the box factory or the slash burner 125 years ago.

A prototype example is this SP narrow gauge stock car weathering away at the museum in Perris, California. Over a hundred years old and still straight and tight and knot free.

Continued on next page.

Finally, a couple more examples of plastic wood cars.

Detail of a pickle car built up with various pieces of "plastic wood".

A "plastic wood" gondola.

AIRWIRE® NEW!

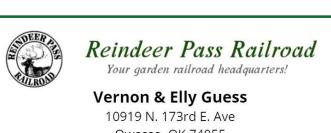

- Programming and Operations Throttle
- ► Big, bright and rugged graphics display
- ► Single turn speed knob with speed readout
- Dedicated key for locomotive direction
- ▶ 40+ hour Li-Ion USB rechargeable battery
- ► More loco memory, more consist memory
- Compatible with all AIRWIRE products

AIRWIRE is the preferred battery-powered wireless DCC control system for garden railroads. And the new T6000 PRO-OPS throttle has several new features requested by many customers. The new sunlight-readable graphics display shows the active locomotive number, frequency, speed and direction. The built-in backlight can be turned on or off with a single key press. Store up to 16 individual locomotives. Consist Memory now stores up to 3 multi-unit locomotive consists with up to 4 locomotives in each consist. Available now at any of our authorized AIRWIRE dealers or direct from CVP. For ordering options and pricing, please see the CVP website.

Bachmann Railtruck Conversion

Back in 2015 at the NGRC in Denver, I asked Marilou what sort of engine she would like. She picked a red Bachmann Railtruck because it looked cute.

As our Lastchance and Fairplay Railroad is DCC powered and the Railtruck is just analog DC, we did not have much chance to run it, except at the DGRS club layout,

The running properties, however, were not so good. It ran fairly quietly in reverse, but made rather bothersome noises running forward. On downgrades or trailing throttle, the Railtruck has a serious surge as the slack in the drive train is repeatedly taken out and then builds up again.

However, since I don't have the ability to run analog DC on our layout (it would screw up all the DCC connected track controls), we did not run it. Only after some pressure to run it on our own layout, I started to look at the alternatives. I could convert it to DCC, add a sound

system or just have it battery powered. Since I had converted a Hartland "Doosie" rail bus to DCC and battery power, I thought I should go ahead and make the same conversion to the Railtruck. This would enable the rail truck to be run on several different types of powered layouts.

- The Railtruck had a mechanical issue with the transmission. It surges due to a sloppy drive train and gearbox.
- There is very little room to put a battery, R/C speed controller, sound system and speaker in the truck.

Volume 38 Number 6 June 2021

Doing some research on the web, turned up some interesting answers to the problems. There is a total of about 3/4 turn of the rear drive wheel before all the play is taken out of the driveline. The worm gear itself is a single lead screw which cannot be back-driven. When running on the flat, or with a load, the slop is all taken up and the Railtruck runs smoothly. However, when running downgrade, the driveline doesn't provide enough drag and the Railtruck runs away due to the pull of gravity until the driveline slop is all taken out the other way and the driveline binds up against the worm causing the Railtruck to nearly stop. As the worm gear continues to turn, it takes up the slop again and drives the Railtruck downhill until the acceleration of gravity takes over again and the Railtruck runs ahead of the driveline. There was no economical replacement for the driveline all the way back to the worm.

Several articles suggested fixes from replacing the entire drive train to a simple fix of adding drag to the Railtruck with a brake on the front axles. Obviously, this would be an easier and cheaper solution. This was accomplished by putting a brass strip to act as a spring bearing against the front axles.

This has helped to make the surging less noticeable, but it is still there if you watch closely.

The next step was to add battery operation. At this point I looked at several

different solutions and decided that I wanted track DCC power as well as battery power, mainly because the battery would be very small given the size of the truck.

So my plan was to use a Soundtraxx Tsunami TSU 1000 (Goose sound) as the motor controller and sound system.

I removed the tool box, all the electronics and wiring from the truck bed. and replaced it with the Tsunami and speaker box.

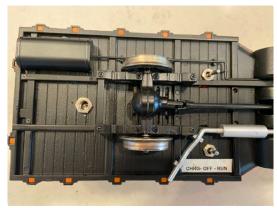

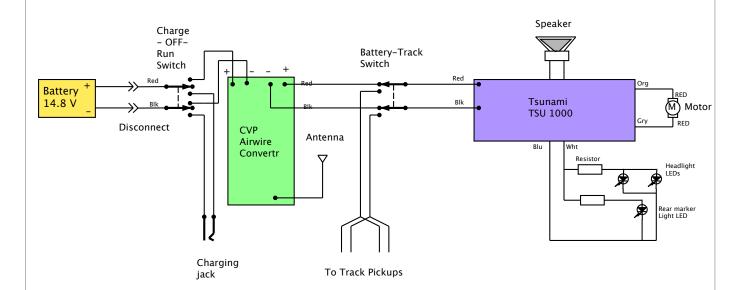

Volume 38 Number 6 June 2021

I also added a Track/Battery select switch so we could use it with track or battery power, a Charge/ OFF / Run switch and charging jack.

The next aspect was to add Radio Control and the battery power. CVP Products makes a small ultra miniature radio receiver and DCC booster, which is called an Airwire Convertr. It was a very simple approach; connect a battery, the DCC controller (The Tsunami) to the Convertr and one can control it with the Airwire throttle.

The circuit diagram showing all the major components is shown below.

At the time, the only converter available was the 2.5 amp continuous Convertr-25X. Since it was really small, it fits nicely into the cab of the rail truck.

The battery has to be small enough to fit into the back bed of the truck, yet powerful enough to run the truck for several (3) hours without stopping. Since the motor only draws less than 1/2 amp at full speed (not very realistic), the calculation of .5 amp x 3 hrs equals 1.5 amp-hrs. The closest and

Volume 38 Number 6 June 2021

smallest battery was a 14.8 v, 1350 mAh (milliamp-hour), which fits nicely in the bed of the truck.

Since the battery, Tsunami, speaker box, and the switch are packed into the bed, with sacks of grain and lumber, the addition of a charging jack means I can charge the battery without taking everything apart.

The final change was to replace the LED lights in the front headlamps with ones that looked better and were brighter.

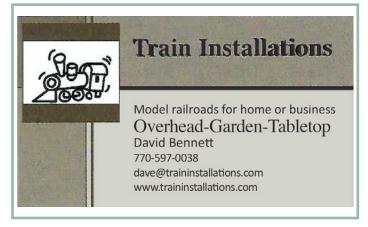

Altogether, it was a fun project that took a bit of time as I had to do a lot of research for the issues and find solutions. Once a path was chosen, it did not take very long to get a running and dependable rail truck.

LOCOLINC SERIES 200

Wireless Control Solutions

Keithco, Inc locolinc.com (503) 635-7604

Automatic device discovery and WiFi format make the new Locolinc 200 Series the most user friendly interface on the market.

- · WiFi format at 2.4 Ghz
- · Loco and Accessory Receivers
- Track or battery voltage (12-24V dc)
- Automatic device discovery: Loco & Accessories
- Superb NEW user interface 3"x 5"x 1"
- · Easy implementation & cost effective
- · Easy conversion for existing customers
- Renown LOCOLINC quality & reliability

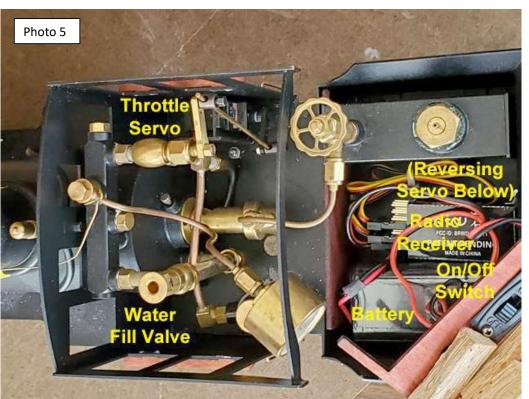

An Introduction to Live Steam Locomotives Part 2

Adding Radio Control (RC) to your live steamer and other Considerations By Pete Thornton

Remote control of your live steamer is a nice thing to have, just as it is for a track- or battery-powered electric locomotive. You can stop and start the train without leaving your chair! There is another feature of live steam that makes radio control very helpful, especially if your track has any hills at all. Unlike an electric, your live steamer will struggle to climb a hill if you don't open the throttle a little more, and will run away down the hill and probably crash at the bottom if you don't close the throttle. (Rather like the real thing.) And like the real thing, hills should be kept to 2-4%, but you will still need radio control. Geared locomotives, like the Shay or other models designed for beginners, do not have a problem with hills and therefore make a good choice for a regular garden.

Unfortunately, most American live steam locomotives do not come fitted with r/c gear. (Many UK suppliers offer models with r/c gear fitted.) You have to make brackets and figure out linkages, and work out where to put the batteries, receiver, and servos. Then you have to drill holes in your new locomotive to fasten it all together. You will now understand why flat steam tracks are quite common.

In photo 5 you can see my Regner Heisler cab which has radio control, supplied as an 'addon' kit by the manufacturer. The components are the same ones used in model aircraft or r/c cars, so they are easy to find. Often you have to make up your own fitting "kit" as few manufacturers supply the brackets and holes needed.

(The loco in photo 3 [GR News Sept/Oct 2021] was sold as 'r/c ready', which means it has the metal throttle arm with holes in it. That's all it has, although the tender in photo 4 [GR News Sept/Oct 2021], also 'r/c ready', has a tube through the water tank to the rear to facilitate installing the gear.)

continued on next page

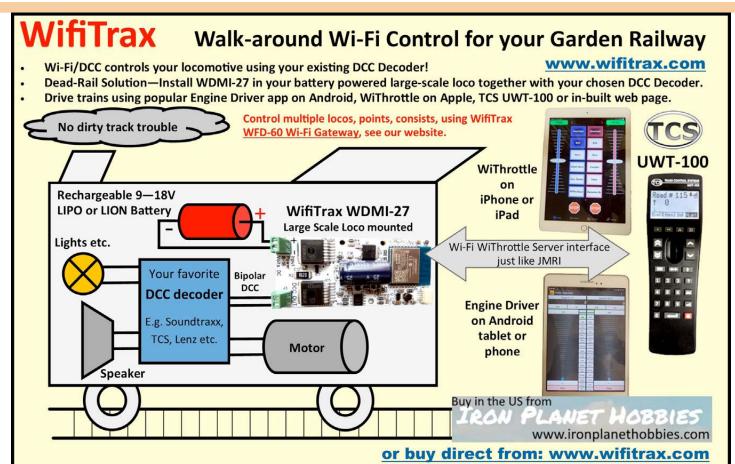

For the reasons mentioned in the previous section, many live steam tracks are level. As much of the charm is in running the locomotive and enjoying the sight, pure steam tracks tend to be short on scenery, like the track in the lead photo, shown last month. And owners tend to be older, so the tracks are set higher than ground level to make loading and running those heavy locomotives a little easier. The wider the curves,

the better – one track we visit is 200' x 100' approx., and has 20'+ radius curves (40' diameter.) If you are running a N&W J class express locomotive, then LGB R1 curves just won't work. Most live steamers are spec'd for 4' radius minimum, and the big ones need 10' radius, 20' diameter. The 1:32 scale mainline locomotives also tend to be made to finer scale tolerances so they have skinnier wheels that require better switches – another reason you won't find much LGB track in use for serious live steam. However, there is no reason that you can't enjoy the small to medium size locomotives on a typical garden railroad. My friend's layout has 5' minimum radius curves with mostly LGB track and switches, and our live steamers will run perfectly happily. Photo 6 is a 2-cylinder shay looking quite at home among his trees.

Steamups

After describing how big a track you need to run those big live steamers, it probably won't be a surprise to hear that this is a social hobby, and anyone with a track will often offer to host a 'steamup', just like the FGRS get-togethers, but with the addition that everyone brings a favorite live steam engine or two to run.

Several clubs have large tracks, like the Tradewinds & Atlantic RR in Coconut Grove, or the Ridge Live Steamers, where members can turn up and run trains even if there is no-one else around. Other tracks are portable, and can be set up at an event so we can all come and entertain the crowds with our trains.

There are also a couple of annual Steamups (usually,) where a large hall or hotel atrium is taken over for a few days so that everyone can run their trains and socialize. Photo 7 (below) shows the main hall at the National Summer Steamup in Sacramento, where a variety of tracks are available for owners to enjoy running their trains.

Manufacturers

Live steam locomotives are expensive. They are made in small batches from stainless steel, brass and copper, and when they are gone, they are gone. Very few models ever get a rerun, so if a particular locomotive catches your eye, buy it now or never. The N&W #611 in lead photo, last month, originally sold for several thousand dollars. And while you can find locomotives for \$500 (+/-), they tend to be small, limited in capability, and not very satisfactory to own.

While there were many early manufacturers of live steamers, like Bing and Carette, you won't find them except on eBay. Here's some of the ones you will find, with a few notes.

Mamod (now MSS) in the UK makes very inexpensive locos and kits, but only recently has started selling decent locomotives, with butane gas tanks. The Sterno tablet fired locos are not recommended.

Roundhouse, also in the UK, makes bullet-proof steamers ideal for beginners, as they work without any issues or problems. Many are available in 45mm gauge, and most have r/c built in at the factory as an option. The range of US prototypes is limited.

Regner in Germany has been making live steam models for many years, and most are excellent. Their 'easy line' locomotives are available as kits or ready-to-run. The kits are simple and will give you a good idea of the parts, should you ever need to take it apart for maintenance.

Aster in Japan offered kits and ready-made models of many different locomotives, in particular large ones, like the UP Big Boy. They recently reorganized and joined forces for manufacturing with Accucraft.

Accurraft is in China and has been taking advantage of low labor costs to make complete models of many prototypes, big and small. The big ones are great if you have some experience – they even offer one set up for coal firing. For the inexperienced, their small to medium size locomotives are ideal: the shay, Forney, mogul and other similar locomotives are very satisfying to own.

WuHu/Bowande are also in China and are a recent entrant into this field. Their models get good reviews, although the range is limited.

There are many, many small manufacturers that produce a limited range for a few years, and then the owner retires or decides to stop. A fun place to see the variety is Marc Horowitz's Locomotive of the Month, which ran from 2000 to 2010 and has a diverse range of locos from his collection. There is also a Gallery, which is worth a look, of owner contributions since 2010. http://www.sidestreet.info/railways/gr.home.html

As some products are inexpensive, they can sometimes require a little fiddling to make them work well. The internet forums are a great source of information if you run in to a problem. It was mentioned at the beginning of this article that these models are made in small batches. If you are curious, the bottom of the Accucraft.com website (not the new "livesteamstation.com",) has a link to "Legacy" models, where you will find lots of interesting products that they don't make any more. They do come up on the used market occasionally, so keep your eyes open. Live steam is lots of fun and different from running trains with electricity. Give it a try, and feel free to email me (pthornto@aol.com) with any questions – I may be able to tell you where to find the answers.

ON DEMAND GARDEN RAILROADING Part Four

HOSTING AN OPEN RAILROAD

An 'On Demand Garden Railroad' simplifies hosting an open railroad.

- Subject only to visual inspection of track, checking that switches do switch and that batteries are charged, our battery-operated locos are ready to run.
- After running track cleaning engines and hand-polishing any stubborn gunk, our track-powered locos are also ready to run.
- After a once-over with a shop-vac around a layout, our railroad looks tidy.

Nonetheless, there are still many things to do before opening our railroad. The tasks vary by railroad but several garden railroaders with extensive 'Open Railroad' experience collaborated to develop the task lists below.

Two thing we recommend for all.

- □ Recruit one or more train engineers to operate consists, leaving you time to meet and greet.
- ☐ Keep operations simple!

TASKS DURING THE WEEKS BEFORE OPEN RAILROAD

- ☐ Recruit train engineers.
- ☐ Prune vegetation, especially close to tracks.
- □ Plan refreshments (if any).
- ☐ Plan activities for kids (if any).
- ☐ Get any signage needed.
- ☐ Consider liability insurance.
- ☐ Promote your 'Open Railroad' (if applicable).

TASKS THE DAY BEFORE OPEN RAILROAD

- ☐ Clean the railroad with a shop vac.
- ☐ Clean areas that cannot be reached with the vac including the inevitable spider webs.
- \square Reposition varmint-mauled figures.
- ☐ Ensure that tunnels are clear of anything that could impede a consist during the open railroad.
- ☐ Set out stored buildings and trackside details.
- ☐ Remove any rain/sun-protection devices.
- ☐ Check that any trackside sounds are operating.
- ☐ Check that any trackside lighting is operating.
- ☐ Ensure that spare loco batteries are charged.
- ☐ Put new batteries in any remote throttles.
- □ Oil axles/ensure that couplers are snug.
- ☐ Set out any required 'out of bounds' signs.

And, last but not least, run your consists with the train engineers that are helping you at the open railroad.

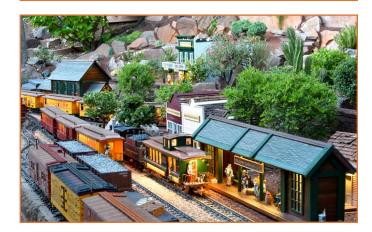

DAY OF OPEN RAILROAD TASKS

- ☐ Final visual inspection for track obstacles.
- ☐ Final check for spider webs.
- ☐ Test runs of the consists and test steam-ups.
- ☐ Set out signs to let folk know they have arrived, where to park and where to enter.
- ☐ Set out guest book (and writing instrument).
- ☐ Set out any literature about the railroad and/or any video presentation we are going to share.
- ☐ Set out refreshments and children's activities.
- ☐ Make sure that the guest bathroom is presentable (if it is to be available).
- ☐ Consider watering the railroad; gardens often look better after a recent watering.

THE HOUR BEFORE OPEN RAILROAD

Chill out and enjoy how wonderful your RR looks!

We welcome **YOUR** comments on our 'Open Railroad' checklist for a future GRNews.org Bonus.

A Variety of Pop Up G-Scale Railroad Displays

Platforms of board on block walls or on boxes can be used to raise the level of your temporary layout and will be easier for your train crew to maintain. Plan your track and building placement ahead of time, so you can set up the hard-to-reach areas first.

San Diego GRS set up a desert and a small fairyland (with giant toadstools) on block-supported platforms for the San Diego County Fair in Del Mar CA.

Central California Coast GRS set this small display up at the Central Coast Railroad Festival.

The Puget Sound GRS included this sawmill diorama at the Lion's Train Show in Lynden WA.

South Jersey GRS set up this snowy layout at Ocean City Music Pier for a weekend. The club will also run trains on the Battleship New Jersey through Christmas.

For over 30 years, Steam in the Garden Magazine has covered garden scale live steam trains. We provide information that is aimed at live steamers of all skill levels, bringing together the best that we can for the hobby. Available in **Print** and **Digital**. With a digital subscription you can download and take us with you on

your laptop or tablet plus access our complete archive of magazines, over 30 years smallscale live steam of knowledge. Visit us online at www.steamup.com for more information. Until then — Happy Steaming!

STRAIGHT FROM THE IRON HORSE'S MOUTH

Letters to the Editor should be sent as e-mails only to Carla Brand Breitner at: Editor@GRNews.org

Letters will then be addressed accordingly and/or passed on to the author for further edification. Unless marked otherwise, letters to this publication are assumed to be submitted for print. Please include your name and club affiliation. Please note that we may not be able to print all letters, though we will try to respond to them. Letters may be edited for length and clarity. We are unable to answer requests for information about specific products or systems; these are best addressed to the appropriate manufacturer.

SHOWCASING YOUR RAILROAD

Our railroads are cool. Thousands of hours are invested creating them and getting our trains to run smoothly. Plants, water features, buildings, trestles, tunnels, rock formations, figures, animals and trackside paraphernalia make amazing settings. Sounds and lights bring them to life.

We love showcasing our work and creativity and do this in 4 venues:

- ♦ In our magazine.
- ♦ On our Facebook Group
- ♦ On our Facebook page
- ♦ On Instagram

We would love to showcase YOUR railroad.

How to Download GR News

GR News is a PDF document meant to be read in Acrobat Reader. It can be read in many browsers, but is best inside Acrobat Reader where you can control more display options and jump around throughout the magazine. All browsers have a download option, but the icons can vary. Look for an arrow pointing down and try clicking on it; then choose "Save File" and a location on your device. Some icon examples are shown here. Look for the arrow.

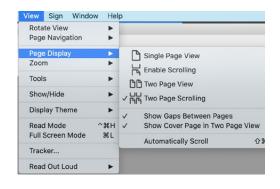

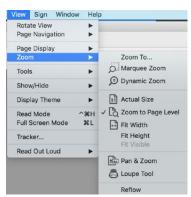

How to Change Page Display

When *GR News* is read in Acrobat Reader, the display can be adjusted using choices under the "VIEW" menu. *GR News* is designed for Two Page Display with Cover, so the front page is alone and the rest of the magazine appears as a two-page spread as if it was a print magazine. You control this with the "Page Display" choices under the "VIEW" menu. You can choose "Fit Page" or "Fit Height" to see pages without having to select a percentage. Size of page controls can also be found above a PDF on screen or by clicking a magnifying glass icon with a "+" inside. (Not the "search/find" empty magnifying glass icon.)

Hope these explainers helps make reading *GR News* more fun. Enjoy.

Are you unable to see all our website pages on your mobile phone? If so, let us introduce you to

THE 'HAMBURGER'
