OreVision discovers porphyry-type mineralization under conductive overburden

OreVision IP® discovered a new body that couldn't be seen with conventional IP due to the conductive overburden.

OreVision IP®

Good signal through conductive overburden
Get more information at depth for the same budget

What our client thinks about our services

“OreVision IP® demonstrated that it is a leading technology for a terrain with thick conductive overburden. At a comparable price with other techniques, we get 2 -3 times more for our investment. Abitibi Geophysics has developed a robust survey process and technology at a very affordable price.”

Our expertise,
your discovery
