

Success

Imagineer and ViiMed® collaborate to further strengthen cybersecurity posture

About the customer

ViiMed®, a DC-based small business, has architected, built, and deployed an enterprise healthcare information technology platform that will serve as the foundational solution and framework for healthcare delivery to the edge. ViiMed's unique architecture, user experience, and advanced data movement capabilities enable care teams to engage their patients, efficiently document care, and deliver improved outcomes in a continuous and scalable manner. The ViiMed® platform's combination of no-code workflow configuration capabilities, solution architecture, robust interoperability tools, and a reimagined approach to care delivery makes ViiMed® the optimal solution to redefine care delivery across the globe.

Business challenges

ViiMed® is committed to extending enterprise care delivery solutions to the edge with its no-code platform so that access to care never stops. This modern perspective on healthcare requires an advanced cybersecurity posture with use of containerization and serverless technologies to limit attack vectors and reduce attack surfaces.

While this approach has served well to protect ViiMed® customers from ever increasing cyber threats, ViiMed® is necessarily dependent on both hyperscale cloud service providers (CSPs) and edge infrastructure providers for effective stewardship of underlying technology resources.

Results

With assistance from Imagineer and Oracle, ViiMed® is able to leverage Oracle's distributed cloud architecture, delivering the full functionality and superior economics of Oracle's public cloud anywhere across the health delivery ecosystem, including intermittently connected edge environments. This means that Oracle's security-first cloud architecture is available everywhere ViiMed® needs it to be.

With Oracle, ViiMed has stronger security, a lower cost of ownership, greater geographic availability, and a cloud-agnostic hosting framework for providing no-code and edge offerings at scale to healthcare customers.

“Imagineer showed us that Oracle has better performance, security, and control than any other cloud on the market. We want the most secure ecosystem available, and Oracle Cloud provides that for us.”

-- Phil Newman, Founder and CEO of ViiMed.

About Imagineer

Imagineer, an Oracle partner with Cloud Service Solution Expertise in [OCI](#) Network Security, works with clients to positively disrupt, modernize, and transform their organizations and business processes.

Noteworthy achievements include initiatives aimed at enhancing human resilience in the food supply chain, leveraging autonomy for streamlined operations, establishing root-of-trust capabilities for high-quality, trusted data, and designing ecosystems and tools for securing and transferring digital value through digital wallets.

Imagineer's proficiency extends to using artificial intelligence and data to fortify security and enhance visibility in data assets, aiding in the management of health issues at local, state, and national levels. Imagineer has developed a modern security posture to effectively mitigate risks associated with cyber-attacks from nation-states. Imagineer's wealth of experience is underpinned by collaborative work with diverse multidisciplinary teams, thriving in highly complex and rapidly changing environments.
