

**AQUABRITE**  
CHEMICALS

# Troubleshooting

Always have your water tested by your professional Aquabrite® dealer.

PROBLEM	CAUSE	SOLUTION
Colored water or Stains	Presence of Metals Reddish-Brown = Iron Blue-Green = Copper Brown-Black = Manganese	1. Adjust pH to 7.4 - 7.6. 2. Using a treatment of 1 qt. per 10,000 gal. of water. Add Stain and Scale. Control directly to the pool. 3. Brush the stained area daily for 3 to 5 days. 4. See your professional Aquabrite® dealer if condition persists.
Green Water or Algae	Copper or Algae is present.	See treatment above or have water samples tested by your professional Aquabrite® dealer.
Black Spots	Manganese (Metal) Black Algae	See treatment above.
Skin/Eye Irritation	pH is out of proper range	1. Adjust pH to 7.4 - 7.6 by adding pH Plus or pH Minus.
Cloudy Water	Suspended Particles High pH High Alkalinity Poor Filtration Low Sanitizer	Have water sample tested by your professional Aquabrite® dealer.
Odors	Improper Water Balance Chlorine Inefficiency	Shock Treatment
