

THE THREE GROUPS OF MASK WEARERS

By Kate Shemirani

Natural Nurse in a Toxic World©

Group 1:

Believe the mask protects from the ‘virus’. Those unmasked are an imminent threat to their survival. Highly physically dangerous. Their actions are fuelled by fear. This makes their beliefs difficult to change. Becoming increasingly vocal, aggressive and physically threatening to those non-mask wearers Empowered by Group 2.

Group 2:

Mask wearers who know it is a lie, but must wear due to social pressure and fear of retribution, employment policy which demand a mask to be worn. These people are angry and *'if they must wear one, so should everyone else'*. These are highly dangerous. More likely to act independently to enforce their personal beliefs. Group 1 empowers Group 2. Group 2 empowers Group 1.

Group 3:

Neither believes nor wishes to comply. Wants an easy life, without any confrontation. Will see others without a mask and as a result may remove theirs, but unlikely to support any victim of 'anti-mask wearing' attacks.

Conclusion:

To change the *new normal* one must appeal to Group 1. This can only happen by removing the *Contagion-Fear*.

All anger is fear based.

Group 1 need to physically see that there are no 'Covid19 deaths', only mislabeled pre-existing chronic/acute disease, inaccurate PCR-tests, radiation sickness from our digital and polluted natural environment, and everywhere, evidence of fear-based propaganda and *empty hospitals*.
