

TRANSFORMING 2020

Announcing the Water 4 Mercy School of
Agriculture with Don Bosco Technical Institute, Africa

The Water 4 Mercy School of Agriculture (WAMSA)

Almost 800 million people lack access to safe, clean drinking water. Over 800 million people around the world are undernourished. These are key statistics that led to the development of WAMSA, an innovative solution to break the chains of poverty and enable rural communities to meet their fundamental human needs.

Designed to **transfer knowledge**, WAMSA is a hands-on curriculum that incorporates the collaborative water and agricultural expertise of Israeli NGO's innovation: Africa and CultivAid at the Don Bosco Technical Institute in Dodoma, Tanzania.

The "**Center of Excellence**" supports teacher training, youth development, job creation, economic empowerment and agribusiness.

The joint program of **technology and knowledge transfer** supports community development and improves the livelihood of impoverished villages.
