WHAT WE COVER

Brakes

The brakes module covers the mechanics of automotive brake systems, teaching students to diagnose issues, replace components, and perform repairs to ensure safe and efficient vehicle operation.

Suspension

The suspension module teaches students to diagnose, repair, and replace key components in steering and suspension systems, ensuring vehicle stability, handling, and ride comfort.

General

The general module provides foundational knowledge of automotive systems, covering essential service, safety maintenance, and diagnostic procedures to prepare students for hands-on work in various automotive repair tasks.

What We Teach

This program is tailored for individuals with no prior formal automotive training, offering a clear path to becoming an entry level technician. Using cutting-edge technology, students acquire hands-on knowledge of essential automotive systems and industry terminology. The curriculum covers the mechanics and physics behind general automotive service, maintenance procedures, brake systems, and steering/suspension systems. Students also gain practical experience in diagnostics, component replacement, and repair, ensuring they are workforce-ready upon completion. This approach helps graduates become equipped with the essential skills needed to succeed in today's automotive industry. The 8-week program offers flexible scheduling, with classes held twice a week at the student's convenience. The course will include 50 contact hours, available 7 days a week.
