Introduction

GargiAI GPT securely integrates with your ClickUp account via OAuth, enabling seamless access to your tasks, spaces, lists, and comments directly within ChatGPT.

Data Collection and Storage

GargiAI GPT does **not** collect, store, or persist any personal data, OAuth tokens, or user information. All interactions are performed in real-time and are ephemeral—no data is saved on our servers.

How Data is Handled

OAuth tokens provided by ClickUp are used temporarily during your active session to retrieve information based on your specific requests (e.g., tasks, comments, spaces). These tokens are encrypted, stored in temp-memory, and automatically expire within 24 hours. No data is retained beyond this period.

Third-Party Integration

We integrate with ClickUp solely through their official OAuth framework for authentication and data access. For details on how ClickUp manages and protects your information, please refer to the ClickUp Privacy Policy.

Data Sharing

GargiAI GPT does **not** collect, store, or persist any data. So, your data is never sold, shared, or disclosed to any third party under any circumstances.

Security Measures

We implement strong encryption for all token handling and enforce secure communication protocols. OAuth tokens are not persisted in any file, database, or long-term storage.

User Control and Revocation

You remain in complete control of your permissions. You close the session and GargiAI will not have any information on You. Session tokens are temporary. If you don't close the session then it expires automatically after 24 hours. You have to login again after 24 hours via ClickUP secure Aouth.
