FOR IMMEDIATE RELEASE
June 5, 2015

The greatest invention for the construction industry since the laser level!

Invis-a-Beam LLC located in Naples Florida, has recently released their new product called the LINE-WIZARD®.

The LINE-WIZARD® is a single user, three part infrared system that uses two Infrared Head Units coupled with an RF Radio Receiver that has the capability to align objects in a straight line at distances of 20 feet to 330 feet (100 meters), accurate within 1/8 of an inch, making this system more accurate than a plumb line at long distances. The LINE-WIZARD® is perfect for aligning fence posts, columns, light poles, parking lot blocks, landscaping, etc.

Using the latest infrared technology coupled with advanced optics, state of the art electronics and advanced software techniques our revolutionary products are in the forefront of precision long-range alignment systems.

With the Infrared Head Units and the RF Radio Receivers designed and assembled in the USA, we only use quality electronic components, high quality materials and durable anodizing and powder coating along with extensive quality control testing, our products are held to the highest manufacturing standards.

Learn more about the LINE-WIZARD® and Invis-a-Beam LLC on our websites: Invis-a-Beam.com and Line-Wizard.com and our Demonstration Videos at: <http://www.line-wizard.com/videos.html>.
