FOR IMMEDIATE RELEASE
February 5, 2016

The greatest invention for your garage since the electric garage door opener!

Invis-a-Beam LLC located in Naples Florida, has recently released their new product called the PARK-DADDY™.

The Park-Daddy™ is a vehicle parking system for home garages. Using advanced infrared technology, state of the art electronics, advanced optics, coupled with innovative software techniques, the Park-Daddy™ uses the same technology and has the same quality as our commercial systems. The Park-Daddy™ will notify the driver while parking their car in the garage, that they have cleared the garage door opening allowing the maximum amount of space in the front of their car eliminating damaging your vehicle or valuable items stored in your garage.

With the Park-Daddy™ system, you can now store items such as bicycles, motorcycles, freezers, lawn mowers, work benches, garbage cans, etc. in your garage and not worry about hitting them.

Unlike expensive vehicle options such as park distance monitoring or parking cameras, the Park-Daddy™ is a precision system that will allow you to set a garage door clearance with as little as one inch.

The Park-Daddy™ can be easily installed in just minutes. The Park-Daddy™ has two Infrared Head Units that mount to the garage walls just inside the garage door opening by using our peel off mounting tape or can be mounted with two screws for easy removal. Each head unit is powered by two D size batteries that last for up to one year or more, achievable with our advanced software techniques.

The system also comes with two RF Radio Receivers that conveniently plugs into a car's cigarette lighter power port, accommodating two vehicles. The RF Radio Receiver will sound with an adjustable tone and a "red" LED will illuminate when the infrared beams are broken. As soon as your car clears the garage door opening, the sound will stop and the LED will change to "green" notifying you that the car has cleared the beam and it is safe to park the car at that possession, leaving the maximum amount of room in front of the vehicle.

In addition to clearance to the front of your car, the Park-Daddy™ can also be used in some cases as a safety barrier for side clearance of your car for objects against your sidewalls of your garage. Also, if you live on a dangerous street with heavy traffic, the Park-Daddy™ will allow you to safely back into your garage without hitting objects giving you the ability to pull straight out into the street from your driveway instead of backing out into traffic.

Designed and assembled in the USA, the Park-Daddy™ does not require any hard wiring or use of AC current. By using our infrared technology, we do not use dangerous lasers that could be harmful to your family member's eyes.

Learn more about the PARK-DADDY™ on our website: Park-Daddy.com.
