

LTC Solutions

Corporate Capabilities

2019

Overview

- LTC is managed by proven, results-driven technical personnel with over 60 years combined experience in IT implementations at high-budget, high-risk organizations. Our staff is highly experienced in all phases of the software development lifecycle process.
- Current projects include mission critical applications for Commercial, Federal, State and Local governments. These systems receive significant oversight and accountability.
- LTC management is available as consultants to assume a leadership role for new opportunities.

Corporate Capabilities

- ERP Design, Integration and Support
- ERP Upgrade Planning and Execution
- Data Warehousing
- Software and Database Operations and Support
- RFP Writing and Review
- Disaster Recovery
- Staff Augmentation

ERP Systems

Design, Integration and Support

- Lead Architectural Analysis and Design activities.
- Engage in System Requirements Gathering.
- Perform Fit Gap Analysis.
- Implement COTS Functionality and Develop Custom Solutions Aligning to Business Need.
- Plan and Execute Application System Integration Testing and Functional Integration Testing.
- Deliver Implementation and Transition Plan.

ERP Upgrade

Planning and Execution

- With our extensive experience, we bridge the gap between business development professionals that may lack the required technical expertise and the Technologists that cannot effectively communicate complicated concepts.
- We recently completed major upgrade of Oracle PeopleSoft HCM for the U.S. Navy supporting more than 400,000 users worldwide.

Data Warehousing

- Maintaining core Data Warehousing Design Principles with time to market consideration
 - Big Data/Data Space Lake
 - Operational Data Store (ODS)
 - Data Marts
- Utilization of various Data Modeling methodologies

Data Warehousing

- Design and Development of ETL Routines
 - Ab Initio Product Suite
 - Oracle Data Integrator (ODI)
 - Oracle PL/SQL
- Implementation and Development of Business Intelligence Products
 - SAP Business Objects
 - Oracle Business Intelligence

Software and Database Operations and Support

- Maintain Data Center Operations for Large Commercial and Government Applications.
- Design Backup and Recovery Solutions for Mission Critical Applications.
- Participate in the Hardware Design and Acquisition Process.
- Design and Implement Enterprise Level Cyber Security Solutions.

RFP Writing and Review

- We leverage our “hands-on” implementation technical experiences.
- Our experience includes work on government and corporate proposals.
- LTC has participated in blue, pink and red reviews.

Disaster Recovery

- LTC was integral in the design of Disaster Recovery for Fortune 50 Companies and DOD systems.
- LTC led the Disaster Recovery of the Navy Standard Integrated Personnel System (NSIPS) following Hurricane Katrina in August of 2005.
- LTC led an unprecedented second Live Disaster Recovery of NSIPS following the flooding of the Millington, TN hosting site in April of 2010.
- Both Recovery events were performed with no loss of data and less than 12 hrs. downtime.

Staff Augmentation

- LTC continues to acquire qualified individuals in a geographic area that has few local resources and even fewer outside resources willing to relocate.
- Our expansive knowledge enables us to screen, identify and acquire quality personnel.
- Our experience has allowed us to build trusting relationships with the local workforce, through past associations, participation in user groups, and our reputation for hiring only the most competent individuals.
- LTC operates on minimum margins. This allows us to provide compensation packages higher than other organizations while retaining our ability to provide competitive rates.

Staff Augmentation

- Our generous compensation package also allows us to attract professionals from across the United States for temporary assignments. We currently employ (and have employed) commuting professionals from both coasts as well as the far Northwest.
- LTC understands that proper placement of key individuals is crucial for program success. LTC can quickly and seamlessly assemble a team of those individuals.
- Among the competencies where LTC can provide leadership is: COTS evaluation and recommendation, System Design, Database Administration, as well as Integration technologies for diverse systems.
