

Embed a Space

Introduction

While you can always [share a link](#) to a Matterport Space and even [customize the link](#), an even better option is to **directly embed a Space on your website**.

This way your Matterport Space will appear in the middle of your webpage, just like a YouTube video.

Basic Instructions

- 1) **Identify the webpage** you want to add the Matterport Space to.
- 2) **Add the following code** to the HTML source code for that webpage. Exact instructions depends on your website (see the following sections).

```
<iframe width="700" height="400"  
src="https://my.matterport.com/show/?m=xxxxxxxxxxxxx"  
allowfullscreen allow="vr"></iframe>
```

- 3) **Replace with the URL to your Space.** Instead of *https://my.matterport.com/show/?m=xxxxxxxxxxxxx* as shown above, use the URL to your own Matterport Space. You can [add URL parameters](#) here too.

Always add **allowfullscreen** to the iframe code when embedding. This is important for your audience who's visiting on mobile because they need to go full screen to enter VR mode.

Using a 3rd Party CMS

If you use a third party CMS (content management system) such as Wordpress, Drupal, Wix, Zendesk, Medium, etc to manage your website then you need to **open the HTML source code** for that page.

The general steps are:

1. Login to your CMS backend
2. Find the post/page/article to edit
3. Find an icon that looks like `</>` to open the source code.

The following example is for Zendesk Help Center.

You'll need some HTML knowledge to navigate through the code to find exactly where to paste the `<iframe>` code.

Some CMSs (such as Zendesk) require you to "allow unsafe HTML" for an iframe to run. Don't worry, a Matterport Space is not dangerous :)

Wordpress.com or Wordpress CMS

Wordpress.com **does not** allow iframes by default, so the easiest way to embed 3D Showcase is to put the my.matterport.com URL into the post in *Visual* tab and Wordpress will turn it into an embed. For example:

Websites that use the Wordpress CMS **do allow** iframes, so you can paste the iframe code directly into the post. For more customization you can also try the following plug-ins:

- [Embed.ly plugin](#) with also [embed.ly's support for Matterport](#)
- [iframe plugin](#)
- [WP3D Models](#)

Wix

Start by editing the page you want the embed in. Click **Add > More > Embed a Site**.

A grey box will appear. Move the grey box to where on the page you want the embed.

Click **Enter Website Address** over the grey box. **Paste the URL** to your Matterport Space. You should see 3D Showcase should appear in the box.

[Learn more about adding HTML with Wix.](#)

Medium Blog Post

In the [Medium](#) backend, first find the post or draft that you want to embed the Matterport Space in.

1. Click **+** to add a new section.
2. Click **◇** to specify that you want to add an embed.
3. Paste the URL to your Matterport Space.

Placester

In the [Placester](#) CMS backend, first open the page that you want to embed the Matterport Space in.

1. Open the `<>` HTML icon
2. Paste the `<iframe>` embed code.
3. Click the `<>` HTML icon again to return to the visual editor.

You'll now see your `iframe` embedded in the editor view. Save your changes and the embed will be live.

Visit [Placester support](#) for more details.

Direct Access to the HTML Source Code

If you don't have a CMS where you can make changes, **contact your site's webmaster** and ask for help.

If you are the webmaster (or if you have direct access to edit the HTML) you can just add the `<iframe>` code directly to HTML source code.
