About Inland Tarp & Liner® (ITL™)

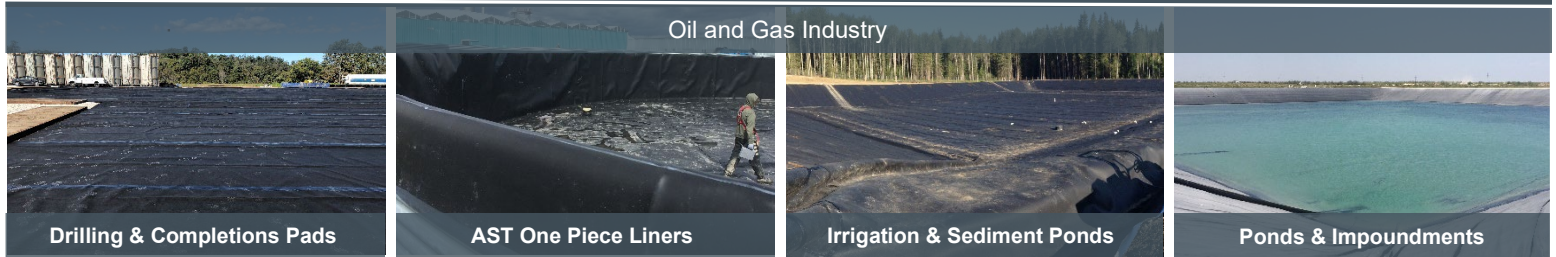

Over the past 40 years, Inland Tarp & Liner® has evolved from a hay tarp manufacturer and service company to one of the largest custom fabricators of premium geosynthetic products. Custom sizes and quick delivery, ITL™ quality applications and solutions span an array of industries around the world from agriculture to oil and gas.

ITL™ has over 250,000 sq. ft. of modern fabrication plant & distribution space, with a combined capacity to produce over 300 million square feet annually.

Quality product lines improving safety and environment integrity across the globe:

- **LLDPE** ranging from 20 mil to 60 mil thicknesses as well as smooth, textured, and anti-skid surfaces.
- **CWPE** from 12 mil to 60XGL™.
- **GEOTEXTILES** starting at 4 oz. up to 16 oz.
- **GEOCEMENTITIOUS** mats, or Inland Tarp & Liner's new ITL Reinforced Concrete Roll® is reinventing concrete. Just unroll and go in a fraction of the time.

Advanced Containment Solutions - Premium Coated Woven Polyethylene (CWPE) & Linear Low-Density Polyethylene (LLDPE)

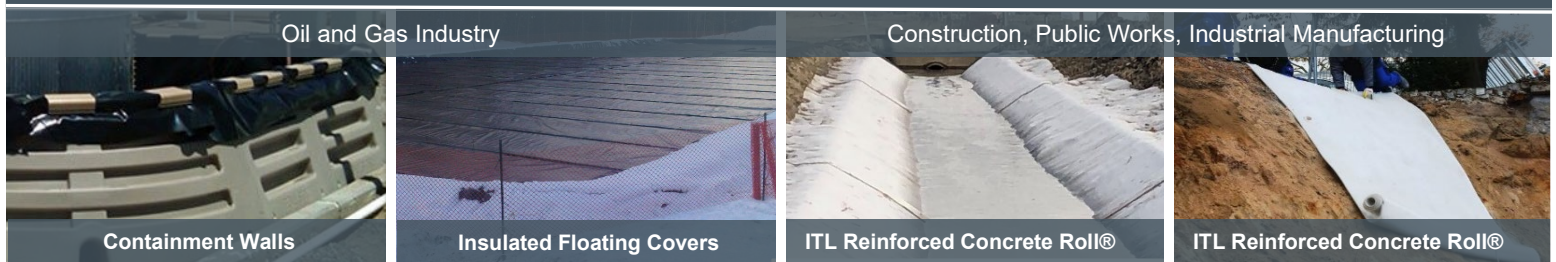

Drilling & Completions Pads
Coated Woven Polyethylene (CWPE) is a perfect material for your pad liner applications. Extremely durable with high puncture strengths that will withstand direct traffic. Protect the entire pad with large single piece fabricated CWPE panels requiring limited to no field seaming.

AST One Piece Liners
ITL™ offers one piece stepped liners for potable or freshwater storage. Oil and Gas applications include the storage of brine and specialty liners for oil and condensate. Custom AST covers are also available.

Irrigation & Sediment Ponds
ITL™ can fabricate some of the largest single piece liners or covers in the industry. Depending on material selection, up to 11,000 pounds can be fabricated in one piece, which can cover as much area as 23,000 square yards.

Ponds & Impoundments
Common in the fracking industry, large fabricated LLDPE liners from ITL™ reduce installation time significantly. From 30mil to 60mil LLDPE, we can fabricate custom sizes to meet requirements. Products are designed for long term usage in harsh climatic conditions.

Advanced Containment Solutions

Containment Walls
Engineered specifically for secondary containment and spill prevention, Poly Dike MPE walls are for short-term or long-term applications. The modular design makes installations very easy and efficient. The Poly Dike MPE walls are light weight, flexible and require no hand tools or heavy equipment for installation. Available in 1', 2', 3' and 4' heights.

Insulated Floating Covers
Floating covers reduce evaporation or contamination with a single piece cover for ponds or tanks. ITL™ floating covers provide an economical means to further protect valuable temporary storage.

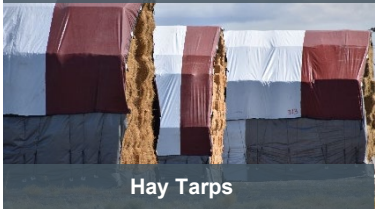

ITL Reinforced Concrete Roll®
NEW IN 2020: ITL Reinforced Concrete Roll® or, ITL RCR®, is an advanced cement composite solution that can be easily and quickly deployed. Rolled out and hydrated with a small amount of water, it takes shape into a durable structure suitable for irrigation canals, ponds/containment wells, or banks lining.

ITL Reinforced Concrete Roll®
NEW IN 2020: ITL RCR® is also available for slope stabilization. Installations are completed efficiently with no rebar, cement trucks or specialized training. Available in rolls of 5m x 20m, (16'4" x 65'7"), ITL Reinforced Concrete Roll® can be installed in dry weather, rain, under water, and without traditional heavy cement trucks, mixing, or rebar.

Erosion Control and Containment Solutions

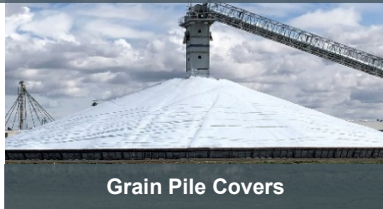

Other Specialized Outdoor Asset Protection Solutions

Agriculture

Hay Tarps

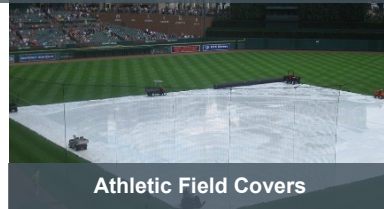

Home of the Bull Flex™ and Performer™ tarp lines, we also offer standard and custom sized side curtains, underlayment, and tie-down kits. By using high-quality components in the tarps, we have achieved superior hay tarps unmatched in the marketplace.

Grain Pile Covers

ITL™ is one of the premier fabricators of stockpile, and Bunker, Conical, and Yolk Style grain pile covers. Standard or custom sizes available with quick turnaround times. Custom rain flaps and other accessories are also available.

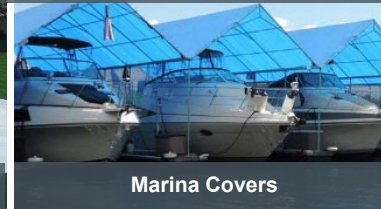

Athletic

Athletic Field Covers

Standard and customizable options make ITL™ athletic covers a preferred choice for home plate covers, athletic field covers, gym floors, and golf courses. Choose a fabric type and color and ITL™ will turn around a quality product ahead of the next bout of bad weather.

Recreation

Marina Covers

Our durable, fade-resistant marina covers are made from quality coated woven polyethylene (CWPE). Materials are sized and stitched in-house for clean seams making ITL™ marina covers easy to install as well as a preferred choice for asset protection.

The ITL™ Advantage

- Warrantied factory seams are welded in a controlled, consistent environment under rigid QA/QC protocols.
- Customized panels equate to a reduced cost in materials and a faster installation.
- Optimal site design with CAD drawings showing the deployment of rolls to help make installations simple.
- A wide array of materials that can be welded together where necessary to reduce costs.
- Overall reduced labor costs and increased installation efficiencies!

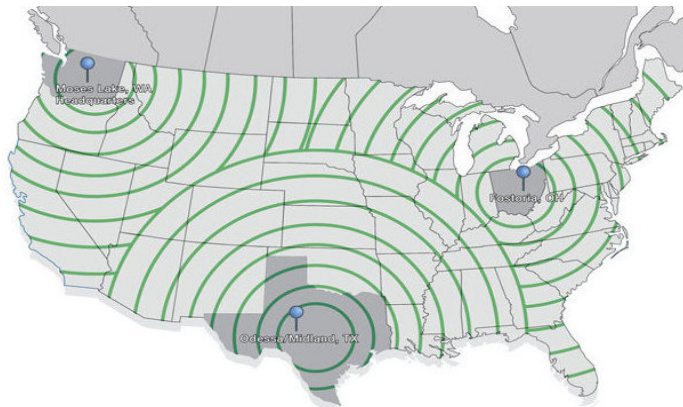

Combined with our expert and personalized focus on customer needs, we provide a premium quality product that is built to last.
