THE PROCESS

1 Quarry

- With 20 years of quarry partnerships, we source blocks directly from Brazil, India, Spain, Italy, China, and more.
- Each block is shipped to a factory for slab production.

2 Factory

- Blocks are processed into slabs at the factory.
- Finished slabs are either shipped to the USA for domestic fabrication or cut to size overseas for new construction.

3 Slab Production

- Granite and marble blocks are cut using gang saws or wire saws.
- Quartz slabs are made on specialized quartz production lines.
- We choose the method based on project scope and material needs.

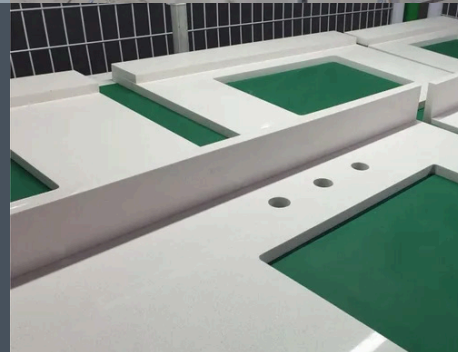

4 Domestic Fabrication

- Blocks are processed into slabs at the factory.
- Finished slabs are either shipped to the USA for domestic fabrication or cut to size overseas for new construction.

5 Cut to Size Fabrication

- For new construction, we fabricate from drawings at our overseas factory.
- Materials are shipped directly to the project site and installed on location.
- Ideal for larger projects due to significant cost savings.

6 Final Walk Through

- At project completion, we conduct a final inspection with the contractor and property manager/owner.
- Ensures all work meets specifications 100%.
