

What's Included in your Post-op Packages

Your post-op package may feature a variety of treatment modalities and techniques, tailored to different stages of your recovery journey.

This specialized massage therapy is designed to promote lymphatic drainage, reduce swelling, and enhance recovery following cosmetic procedures such as tummy tucks, liposuction, Brazilian butt lifts, etc. By supporting the body's natural healing process, this technique helps to accelerate recovery, improve circulation, and minimize the risk of complications. Additionally, it assists in refining and contouring the body, enhancing surgical results for a smoother, more defined appearance.
