

Bubble

Welcome to \$MAD WHITEPAPER:

"A decentralized organization of like-minded people who are looking for a shelter against the crypto winter."

- Every year we hit a bear. Some bigger than others, some smaller.

but the one thing we've learned is that cashing out might not be your best option. Just think about it for a second.

In BUBBLE we found the solution to this problem.

Micro-Crypto: Where you can wager less or more than usual, and if research is done properly, make serious gains.

BUBBLE ERC or as the TICKER will show \$MAD

Our coin is ready to act as just a plain old meme coin. no utilities promised, no celebrities promises, not even holder count promises. But one thing we can promise is: THE TOKENOMICS + STATISTICAL MATH, This makes \$MAD a competitive meme coin.

HEDGE AGAINST THE BEAR MARKET.

"A meme coin with a purpose"

Don't be surprised if a UTILITY falls out of the chart.

BUBBLE Organization Members will be secured from heavy crypto crashes.

The \$MAD ticker stands for MONEY AND DEFLATION.
Essentially, that's our purpose for this memecoin.

Liquid locker that has all the safety of gnosis, and cost of team finances.

Other special features, such as holder benefits will be announced after we launch.

BRIEF STORY FROM THE PROJECT FOUNDER:

So, in 2020 when the bear came around, I found 3 micro projects and went all in.

I shilled for free, made posts and call channels. All of my friends cashed out.

But, when the bull came back at 2:30AM est last year around now, 100% of my friends at home were too late, and now they had less ether than before. Sure, they didn't lose money in USD.

However, the 3 coins I picked and pumped did \$30mill, \$75 mill and close to \$150mill MarketCap.

You could say if all my friends added their ether they used to have up, I was now holding it. So, there it is.

While the dollar inflates, BUBBLE will be burning and buying 3% of every purchase. That means 100% of every purchase will go to liquidity, and your deflationary investment begins immediately.

Now we had 3 rounds of fundraising but dump protection again through thorough math will prevent a crashed chart.

The first 24 hours have a higher sales tax rate, and the seed sale participants start 4x down.

With 15% sales tax dumping won't be an issue from presales.

Us the TEAM, we created this eco because we wanted it for ourselves. A SAFE MICRO-CRYPTO, to store the next 90 days or so on.

If ETHEREUM wants to stay down, then \$MADETH will keep burning.

Now who in their right mind burns the buys? THE TEAM. Setting a safe and stable floor is our first priority after launching with accuracy.

Once soft cap is met a 24-hour window TBA, if hard cap is met in that time a 4-hour window will be announced.

Stealth launches a public, presales, and did I mention waiting for the audit to come back.

Tax & Allocation:

3% Buy tax used for deflation and liquidity.

15% sales tax on the first day, then drops.

Ends within our first 3 days 6% round trip.

Yeah, our meme has revenue generation already and many more surprises.

Let's pop these Bubbles with \$MAD!
