

FAQ's

FAQ

Will my eyelashes fall out and get damaged if I get semi-permanent eyelash extensions? Properly applied eyelash extensions and care will have minimal damage on your natural lashes. Many eyelash extension customers wear eyelash extensions all year round, year after year. Many of Sandey's customers have been her eyelash extension customers for many years.

What can eyelash extensions do to improve the appearance of my eyes? They are great for anyone who wants to have longer and curlier lashes. Customers often say it makes their eyes pop without applying mascara and eyeliner to the upper lid. Other customers say they feel their eyes look more fresh and youthful in a natural way.

How are eyelash extensions applied? Eyelash extensions is a delicate comfortable service that is done with the eyes closed. The initial application takes 1-2 hours. The extensions are made of a synthetic material that is applied with adhesive while the client is lying down.

How long do eyelash extensions last? With proper aftercare, eyelash extensions usually last 4 weeks. The extensions will shed with the natural growth cycle of your own lashes. If you choose to get touch ups in between they will last for as long as you continue to fill them. Touch ups are recommended every 2-3 weeks in order to maintain the full set.

Classic vs Volume eyelash extensions?

Classic method: Is where 1 lash extension is glued to 1 natural lash. This method is also known as 1 to 1. Classic lashes are perfect for clients who have average to full lashes, but want to add more curl, length and thickness. Classic lashes look more natural than volume lashes and eliminate the use of mascara and an eyelash curler saving you time, energy and money.

Volume method: (2D, 3D, 4D, 5D, 6D, 7D, 8D) Also known as Russian volume, is when multiple lashes are applied to one single natural eyelash, individually isolating one natural eyelash at a time. Using very thin lashes. If two eyelash extensions are applied to one natural lash, it's described as 2D, if three eyelash extensions are

applied to one natural eyelash, it's described as 3D, etc. The lash extensions used in this method are significantly thinner (usually a 0.07 diameter lash extension is used) than the lash extensions used for the classic lash method. Volume lashes are lighter, fluffier and give the client a fuller look. Volume lashes are "perfect" for clients who have thin lashes/ sparse lashes, bald spots or want a more dramatic look.

Are there different sizes and thicknesses to choose from? Yes, depending on the look that you desire. Sandey can recommend a style and length that is best for your individual needs. She carries a wide assortment of lashes ranging from various thicknesses, curls and lengths.

How do I care for my eyelash extensions? It is important that you wait 24 hours before wetting them after your application. Always avoid steam, hot tubs, and be very gentle when removing your eye makeup. Steam and hot tubs break down the glue and reduce the life of your extensions.

Can I get eyelash extensions if I swim or sweat excessively when I workout? Yes, you will need to get fills more often due to the increased wear and tear. However, many women that do these activities get eyelash extensions because there is no need to wear mascara with eyelash extensions.

What products are used? Sandey uses the highest quality products on the market that are gentle and safe for the eye area.
