TYPES OF RHINOS FOUND IN THE WORLD

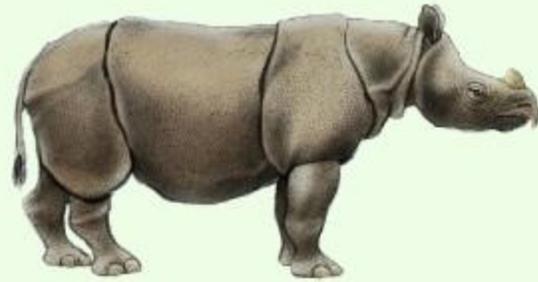

Black Rhino

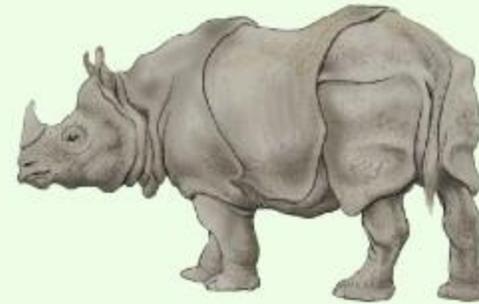

White Rhino

Sumatran Rhino

Lesser One-Horned Rhino
(Javan Rhino)

Greater One-Horned Rhino
(Indian Rhino)

Facts

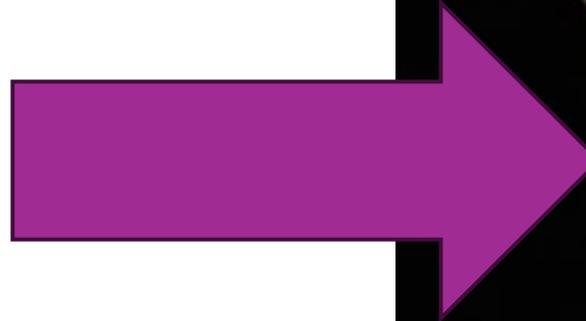

- There are 5 species of rhino in the world.
- Rhinos can weigh over 3 tons.
- Black and white rhinos are both, in fact, grey.
- They're called bulls and cows. Bulls are males & cows are females
- WHAT ARE RHINO HORNS MADE OF? Keratin, the same material that hair & nails are made of.
- Rhinos have poor vision.
- The red-billed oxpecker is a bird that often sits on the backs of rhinos in Africa. The oxpecker has a mutually beneficial relationship with the rhino, and its alarm call can help protect the rhino from poachers. The bird also eats ticks and other parasites from the rhino's hide.
- Rhinos are extremely endangered, mostly due to illegal trade. Currently, fewer than 14,000 rhinos exist in the wild.
- Javan rhinos are the most threatened of the five rhino species, with only around 76 individuals that live only in Ujung Kulon National Park in Java, Indonesia.

Colors of rhinos

- Grayish-brown
- Black
- White

Choo! Choo!

That is not a rhino

A large, glowing pink question mark is centered on a black background. The question mark is composed of a thick, neon-like line that glows with a gradient from light pink to a darker magenta. The text "Any questions" is written in a white, sans-serif font, centered horizontally and partially overlaid by the question mark.

Any questions

The end
