

# CASSINI'S MISSION

SWAY JONES

# WHAT IS THE CASSINI PROBE

- Cassini was a spacecraft sent to space to study Saturn and its moons. It was made by NASA scientists. The United states launched Cassini on Oct. 15<sup>th</sup>, 1997. Then the space craft stated to orbit Saturn on July 1, 2004.

# THE MOONS CASSINI STUDIED

- TITAN
- JEAN DOMINIQUE
- CALYPSO
- ENCELADUS
- TETHYS
- RHEA
- PAN
- DIONE
- MIMAS
- LAPETUS
- POLYDEUSCES

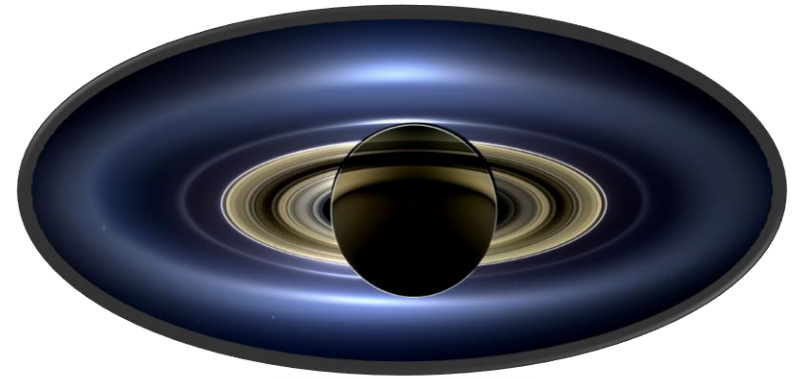

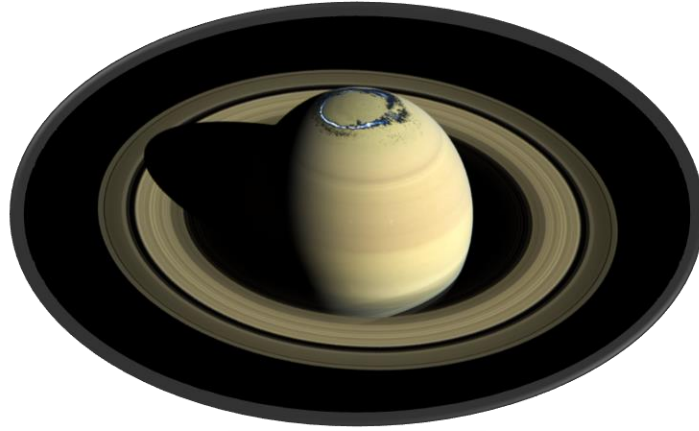

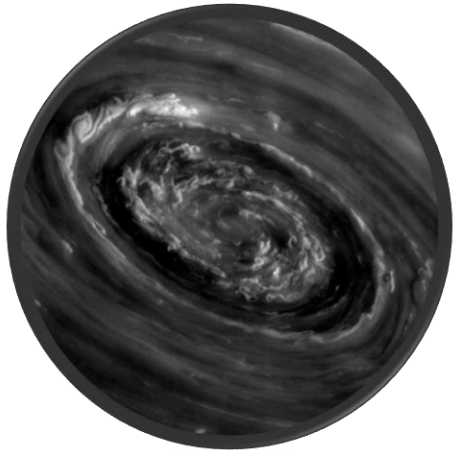

# HOW DID CASSINI GET TO SATURN

- CASSINI FIRST FLEW AROUND MERCURY TWICE THEN EARTH PUSHED IT TO JUPITER WHICH GAVE THE LAST PUSH TO SATURN

# SATURN'S RINGS

- A RING
- B RING
- C RING
- D RING
- E RING
- F RING
- G RING

# CASSINI'S PICTURES OF SATURN

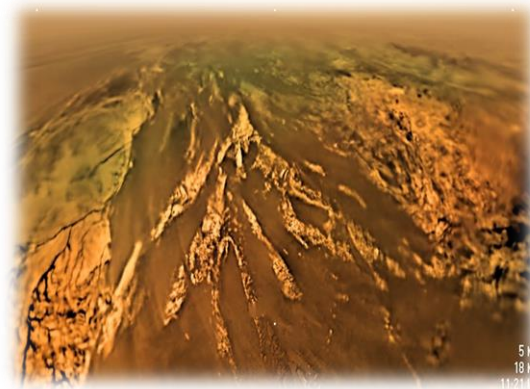

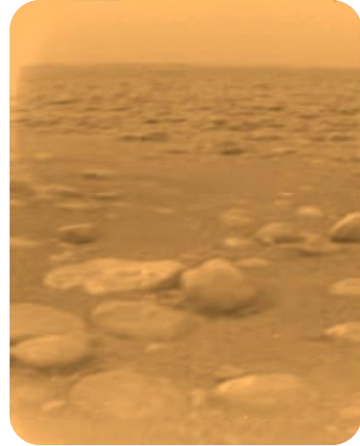

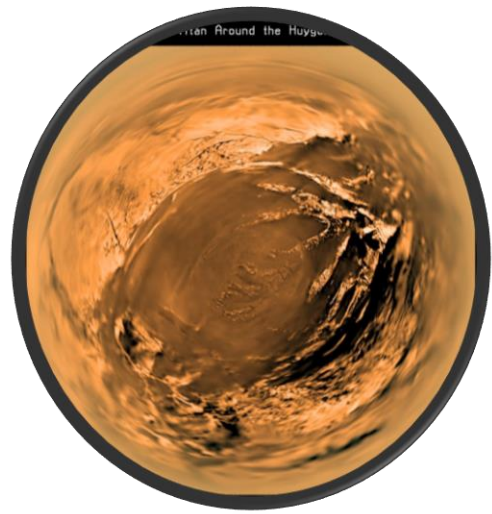

# HUYGENS

- Huygens is a probe Cassini carried on the mission. It was made to drop onto one of Saturn moons named Titan so it could study Titans mysterious atmosphere and ground.
