

Watching Your Home/Boat When You're Away

WHY YOU NEED HOME WATCH

Do you leave your home for extended periods? (More than 14 days)

Do you count on technology to view your home while your away?(What do you do when it doesn't reconnect to the Internet or when it sends an alert, do you have someone you can call)

Do you have a neighbor watch your home for you? (Reality Check...No such thing as a neighbor that WANTS to watch your stuff)

Did you know the two biggest insurance claims for homes are water and/or mold damage?(Who's monitoring your homes humidity, can your cameras notice a water leak, see mold growth or smell hidden mold/mildew)

Did you know most boats sink at the dock?(When is the last time you looked in your bilge, tested your bilge pump or tested your battery strength. Are your deck drains clear of debris, covers secure, equipment in tact)

Did you know by the time a boat is noticeably sitting low/taking on water....portions of your boat may already be damaged. (Regularly checking your bilge pump and battery strength is paramount in preventing a sinking OR a boat lift collapse)
