

Spray Finishing Prices 2025

Below is our current pricing schedule effective from January 2025.

Prices are per square metre and are based upon the substrate material being suitable and prepared to a satisfactory standard.

Projects are expected to be delivered clearly labelled with the spraying requirements on each component, or on the supplied job sheet.

Prices are based on using standard finishing industry products, should the project require a specific product that is niche, a tailored quotation will be raised.

Timber projects that include highly decorative work or fluted panels that are disproportionate to the normal expectations might be subject to additional costs.

These prices are for up to 10sqm projects. 10sqm and above will benefit from a further 5% discount.
