Thermal image scanning – Aids in spotting potential problems clients should know, including:

- HVAC system leaks. Detect HVAC hot/cool spots, heat loss, and other vulnerable inefficiencies.
- Plumbing problems. Find plumbing leaks and vulnerable areas prone to damage in plumbing.
- Moisture issues. Identify moisture hot/cold spots and potential mold or mildew areas.
- Roof leaks. Identify roof leaks, energy loss, and areas that need repair.
- Pest issues. Identify warm conditions and patterns that may indicate a pest infestation.
- Insulation problems. Find areas where there is poor insulation or missing insulation.
- Electrical issues. Identify conditions and temperatures that indicate a pending outage or a dangerous situation with the electrical system.
