## **Abstract**

---

To ascertain efficacy of Homoeopathy in treatment of Sarcoidosis, 100 cases during the period since 2007-2014 were selected for study at Homoeo Cure and Research Institute., Kashipur (INDIA). The efficiency of homoeopathic treatment was miraculously seen in all the cases. Almost all were either cured or much relieved.

## **Aims and objectives**

---

- To study scope of Homoeopathy in treatment of 'Sarcoidosis' with its miasmatic analysis.
- To analyze the results of Homoeopathic medicines when prescribed on the basis of Miasms and on totality of symptoms.
- To prepare evidence based report on treatment of Sarcoidosis with Homoeopathy.

## **Introduction**

---

'Sarcoidosis' is a 'not well understood' complex multisystem, commonplace inflammatory disease, characterized by the formation of noncaseating granulomas. The granuloma is a battle clashed on a genetically susceptible ground between an unrecognized antigen(s) and a highly organized squad of lymphocytes and macrophages. The lungs are the most commonly involved organs, but no structure of the body is known to be immune to its wrecks.

The cause of Sarcoidosis is not known till now. Though not common, it often leads to permanent failure or disabilities of the organs ultimately leading to the end of vital functions.

'Sarcoidosis', like other disease, affects the person as a whole irrespective of the cause. The whole economy of the patient is altered producing the signs of 'Sarcoidosis' as well as a characteristic picture of sick individual including mental and physicals specific to his personality. This disease picture specific to that particular patient is always different from that in another one due to his particular identity proving him to be an 'Individual'. The totality of symptoms depends upon the Miasms under-running the disease process in that individual.

The Psora being the fundamental miasm plays maximum role in altering the physiology rendering the entire imbalance. While in combination with other miasms, it produces the worst stage of the sickness. The syphilis produces destruction of tissues. To combat it, Sycosis and Psora play their vital part. This combination in turn increases the destruction as well as new tissue formation too, producing granulomas and fibromas publishing the complete portrait of Sarcoidosis.

This article examines the current understanding of Sarcoidosis in terms of Homoeopathy.

## Definition of Sarcoidosis

"Sarcoidosis is a disease characterized by the formation in all of several affected tissues of epithelioid-cell tubercles without caseation though fibrinoid necrosis may be present at the centre of a few, proceeding either to resolution or to conversion into hyaline fibrous tissue".

## Epidemiology of Sarcoidosis

- Age at presentation 20–40 years
- More common in females and black people
- Present throughout the world, but more common in temperate climates

## Causes of Sarcoidosis

Possible Causes of Sarcoidosis					
Mycobacteria	Bacteria	Fungi	Viruses	Dusts	Metals
Tuberculous	Corynebacterium spp.	Cryptococcus spp.	Cytomegalovirus	Clay	Aluminum
Non-tuberculous	Propionibacterium	Endemic fungi	Epstein-Barr virus	Pine	Beryllium
Cell-wall deficient (L-forms)	acnes		Herpes simplex virus	Pollen	Zirconium
	Tropheryma whipplei			Talc	
				Mixed	

## Signs and Symptoms of 'Sarcoidosis' with Miasmatic Analysis

- Up to one-third are asymptomatic
- Acute presentation (Lofgren's syndrome) with fever, malaise, arthralgia, erythema nodosum and uveitis
- Chronic presentation with fever, weight loss, dry cough or SOB
- Symptoms are usually mild if thoracic disease only

Rarer presentations include-

- Hypercalcaemia (renal stones, constipation and dehydration)
- Red eyes
- Skin rashes
- Central and peripheral nerve palsies
- Hypothalamic deficiency
- Bilateral salivary gland enlargement
- Cardiomyopathy or arrhythmias

Sign or Symptom	Fundamental Miasm	Secondary/ Associated Miasm
General discomfort, uneasiness, or ill feeling (malaise)	Psora	Psora- Syphilis
Fever	Psora	
Shortness of breath	Psora	Sycosis
Cough	Psora	Sycosis, Syphilis
Skin lesions	Psora	Sycosis
Skin rash	Psora	
Headache	Psora	Sycosis, Syphilis
Visual changes	Psora-Sycosis-Syphilis	
Neurological changes	Sycosis-Syphilis	Psora
Enlarged lymph glands (armpit lump)	Psora	Sycosis
Enlarged liver	Psora	Sycosis
Enlarged spleen	Psora	Sycosis
Dry mouth	Psora	
Fatigue (one of the most common symptoms in children)	Psora	Syphilis
Weight loss (one of the most common symptoms in children)	Psora-Syphilis	
Tearing, decreased	Psora	Sycosis, Syphilis
Seizures	Psora	Psora- Syphilis
Nosebleed - symptom	Psora- Syphilis	
Joint stiffness	Psora	Sycosis
Hair loss	Psora	Sycosis, Syphilis
Eye burning, itching, and discharge	Psora	Psora- Syphilis
Abnormal breath sounds (e.g. rales)	Psora- Syphilis	Sycosis

## **Radiological features of Sarcoidosis**

---

### **CXR**

---

- May be normal.
- Stage 1 – bilateral hilar and mediastinal lymphadenopathy (particularly right paratracheal and aortopulmonary window nodes).
- Stage 2 – lymphadenopathy and parenchymal disease.
- Stage 3 – diffuse parenchyma disease only.
- Stage 4 – pulmonary fibrosis.

**Egg shell calcification of both hila**

---

**'1-2-3 sign' – Posteroanterior (PA) chest radiograph of a 31-year-old woman with class I Sarcoidosis shows right paratracheal (arrowheads) and bilateral hilar (arrows) lymphadenopathy. This pattern of lymphadenopathy is classic for Sarcoidosis and is referred to as the 1-2-3 sign or Garland triad.**

---

The parenchymal disease involves reticulonodular shadowing in a perihilar, mid zone distribution. There is bronchovascular and fissural nodularity. Rarely air space consolidation or parenchymal bands may also be present. Fibrosis affects the upper zones where the hilar are pulled superiorly and posteriorly. Lymph nodes can demonstrate egg shell calcification.

## HRCT

---

Very good at confirming irregular septal, bronchovascular and fissural nodularity. Traction bronchiectasis, fibrosis and ground glass change may be present. There may also be tracheobronchial stenosis. Also may be seen sub diaphragmatic, cardiac, bone, hepatic and splenic involvement on the same scan.

CT shows precarinal lymphadenopathy with rim calcification (arrow). This pattern of calcification is referred to as eggshell calcification and is commonly seen with Sarcoidosis

---

A: CT shows ill-defined nodules in a bronchovascular distribution (arrow) in the right upper lobe

B: CT with mediastinal windowing shows right hilar lymphadenopathy (arrow)

C: CT at the level of the inferior pulmonary veins shows left hilar lymphadenopathy (arrow)

D: CT at the level of the lower lobe pulmonary arteries shows subcarinal lymphadenopathy (arrow)

---

---

HRCT. Irregular septal, bronchovascular and fissural nodularity

---

### **Radiological Differential diagnosis**

- Lymphoma
- Infection – TB
- Lymphangitis carcinomatosa
- Chronic hypersensitivity pneumonitis

## Clinical Staging of Sarcoidosis

<b>Stage 0</b>	A normal chest radiograph
<b>Stage I</b>	Lymphadenopathy only
<b>Stage II</b>	Lymphadenopathy and lung parenchymal disease
<b>Stage III</b>	Parenchymal lung disease only
<b>Stage IV</b>	Pulmonary fibrosis

## Diagnosis of Sarcoidosis

---

- Histological evidence of granulomatous inflammation.
- The exclusion of the known causes of granulomatous inflammation other than Sarcoidosis.
- Evidence of at least two separate organs involved with the disease.

## Examinations and Tests for Sarcoidosis

---

- CBC, Chem-7 or Chem-20, ACE levels
- Chest x-ray to see if the lungs are involved or lymph nodes are enlarged and CT scan
- Biopsy of Lymph node, Skin lesion biopsy, lung, Liver, Kidney
- Bronchoscopy and PFT
- EKG to see if the heart is involved

## Common Complications of Sarcoidosis

---

- Diffuse interstitial pulmonary fibrosis and / or Pulmonary hypertension
- Anterior uveitis and / or Glaucoma and blindness (rare)
- Cardiac arrhythmias
- Cranial or peripheral nerve palsies
- Kidney stones
- Organ failure, leading to the need for a transplant

## Treatment of Sarcoidosis

---

Treatment of Sarcoidosis	
<b><u>Main Goals of treatment</u></b> To improve how the organs affected by Sarcoidosis work To relieve symptoms To shrink the granulomas	<b><u>The treatment depends on</u></b> Involvement of vital organs (e.g., lungs, eyes, heart, or brain) Severity of symptoms Extent of affection of the organs.

## Sarcoidosis and Homoeopathy

In clinical study carried out at Homoeo Cure and Research Institute, Kashipur, total 100 cases of Sarcoidosis were considered. The following results were observed in the research.

Table 1- Prevalence of Sarcoidosis- Based on Sex

Total no. of cases studied 100		
Female cases	52	52%
Male cases	48	48 %

Table 2- Prevalence of Sarcoidosis- Based on Age

Total no. of cases studied 100		
0-10 years	04	04 %
11-20 years	05	05 %
21-30 years	18	18 %
31-40 years	30	30 %
41-50 years	21	21 %
51-60 years	14	14 %
61-70 years	07	07 %
71-80 years	01	01 %

Table 3- Prevalence of Sarcoidosis- Based Marital Status

Total no. of cases studied 100		
Married	87	87 %
Unmarried	13	13 %

Table 4- Pathological Distribution of Sarcoidosis

Total no. of cases studied 100		
Pulmonary	67	67%
Artho	23	23 %
EN	05	05 %
Ophth	04	04 %
Neuro	08	08 %
Nephro	02	02 %
Lymphatic	05	05 %
Cardiac	04	04 %

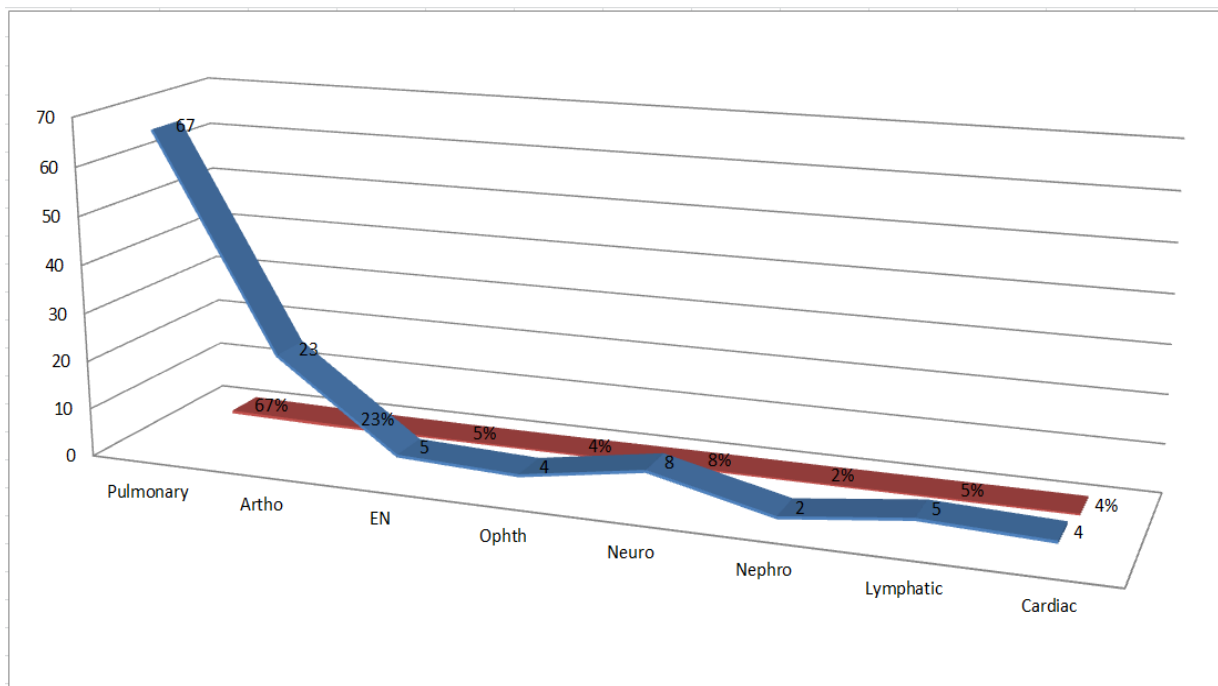

Table 5- Prevalence of Sarcoidosis- Based on Physical Built

Total no. of cases studied 100		
Thin	27	27 %
Obese	27	27 %
Moderate	46	46 %

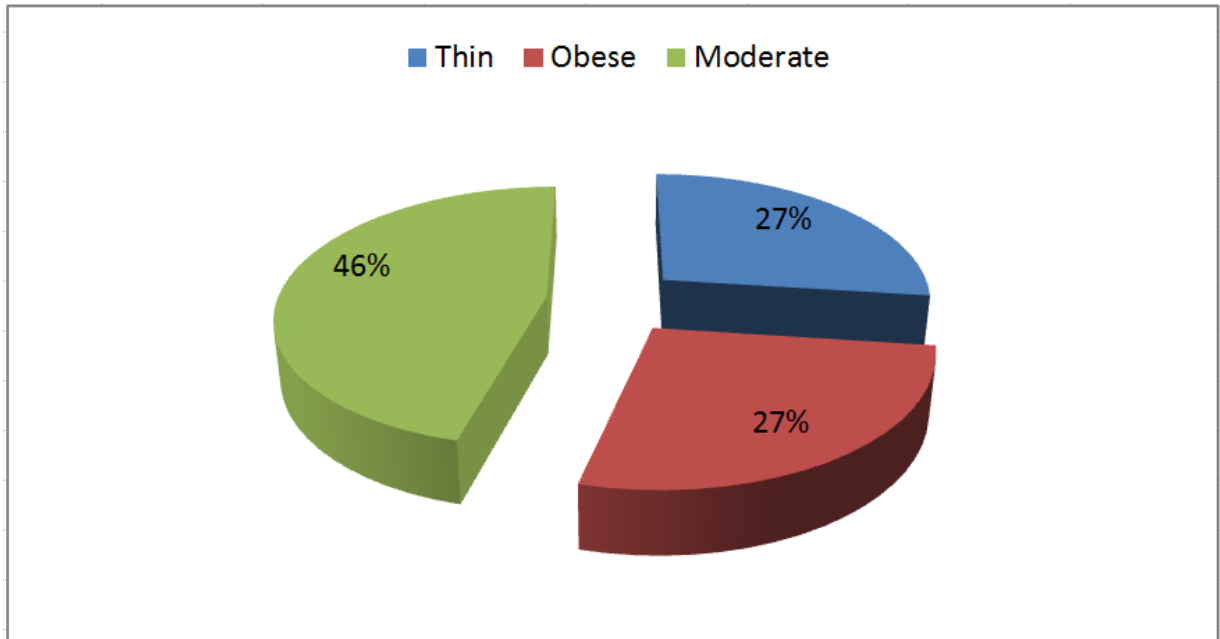

Table 6- Prevalence of Sarcoidosis- Based on Income

Total no. of cases studied 100		
Good Income	46	46 %
Average Income	41	41 %
Poor Income	13	13 %

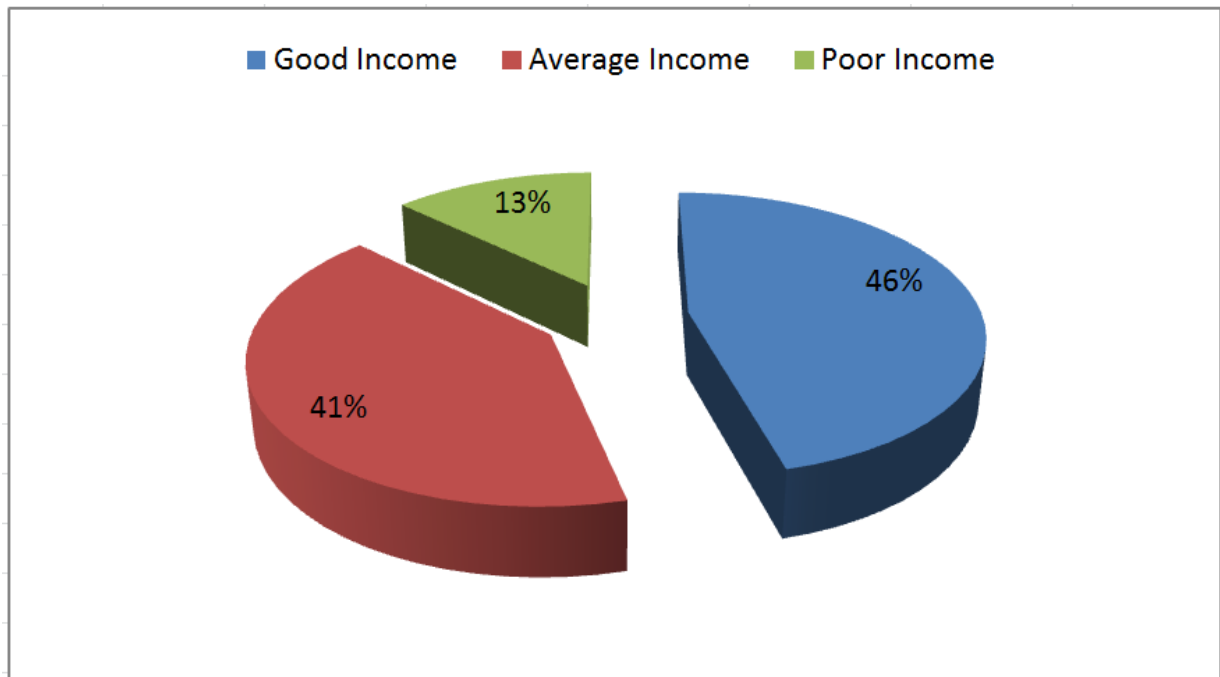

Table 7- Prevalence of Sarcoidosis- Based on Occupation

Total no. of cases studied 100		
House wife	28	28 %
Working	49	49 %
Student	13	13 %
Not working	10	10 %

Table 8- Prevalence of Sarcoidosis- Based on Menstruation

Total no. of cases studied 100					
Males	With Menses			Without Menses	
48	35			17	
Not Applicable	Normal Menses	Scanty Menses	Profuse Menses	Postmenopausal	(Sterile) Prepuberty
	13	11	11	14	3
	37.14 %	31.42 %	31.42 %	82.35 %	17.64 %

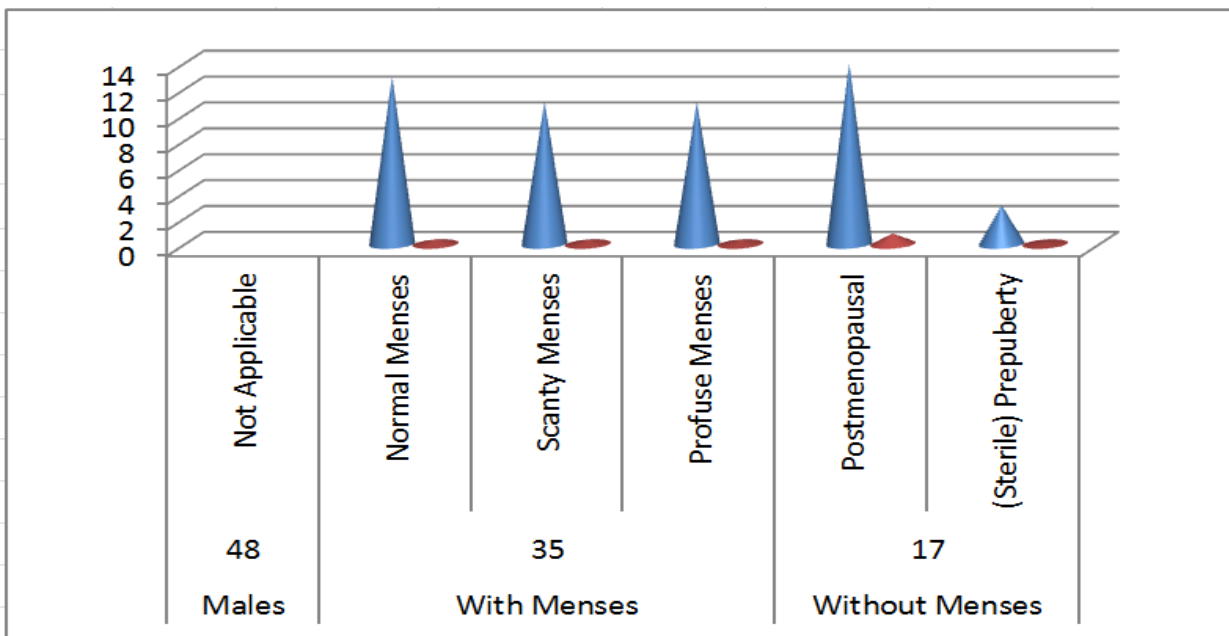

Table 9- Prevalence of Miasms in Sarcoidosis

Total no. of cases studied 100		
Psora	24	24 %
Psora/ Sycosis	17	17 %
Pseudopsora	17	17 %
Pseudopsora/ sycosis	4	04 %
Sycosis	26	26 %
Syphilis/ sycosis	4	04 %
Cancerous	0	00 %
Psora/ syphilis	8	08 %

## Discussion

- Sarcoidosis was found more prevalent in Female patients (52%) than males (48%).
- Sarcoidosis was found most prevalent in patients with age between 31-40 years (30%), least in between 71-80 years (01%) and its prevalence decreased slowly with age reduction from 30 years and increase from 40 years.
- Sarcoidosis was found more prevalent in married patients (87%) than single ones (13%).
- Sarcoidosis was found in moderate built individuals (46%), obese (27%), thin (27%).
- The most frequent was Pulmonary Sarcoidosis (67%), arthritis (23%), Neurological (08%), lymphatic (05%) skin lesions (05%), uveitis (04%), Cardiac (04%), and the least Nephrological manifestations (02%).
- The prevalence of Sarcoidosis was mostly in patients with higher income (46%), least in poor income group (13%) and 41% in average income patients.
- The prevalence of Sarcoidosis was mostly in working patients (49%), house wives (28%), Students (13%) and non-working ones (10%).
- Sarcoidosis was found more prevalent in menstruating females (36%) than those with absent

- or scanty menses (16%), postmenopausal (14%) and pre pubertal ones (04%).
- The most frequent miasm was found to be Sycosis (26%). Others being Psora (25%), Psora-Sycosis combination (17%), Pseudopsora (17%), Pseudopsora Sycosis combination (04%), Syphilis Sycosis combination (04%), Psora Syphilis (08%) but Syphilis and Cancerous nil.
- Out of 100 cases of Sarcoidosis, Cure-rate was 47%, Relieved- 53% and Not Cured- 0%.
- Cure rate was more in females (55.77 %) than males (37.5 %) but rate of improvement was in reverse order i.e. male (62.5 %) and female (44.23 %).
- Cure rate in children was 100% while the least in the aged. With the advancement of age, cure rate was decreasing but rate of improvement was no doubt, increasing.
- The patients from higher income group had highest cure rate while those from lower income group had higher improvement rate.
- The highest percentage of cure was in Sycosis (50%) with 50% relieved, Pseudopsora (33%) with 67% relieved, Psora (0%) with 100% relieved.
- The highest cure rate was in pulmonary and ophthalmic sarcoidosis and the least in nephro and cardiac. But all the types of sarcoidosis showed marked improvement. No case was spoiled or not relieved.
- Cure rate was highest in pre pubertal patients, next in females with profuse menses and slightly lower in others, almost same.
- Cure rate was highest in Sycosis, then Psora and least in Syphilis miasms.
- While prescribing on constitutional basis, cure rate was 54% and while prescribing on pathological basis, it was only 7%. Relief rate was higher in pathological prescribing (93%) and in constitutional prescribing, it was 46%.
- Cure rate of the indicated remedies in this study was about 100% in more than half of the number of remedies used. While all other remedies had not less than 50% cure rate.

## Conclusion

The above study confirms the efficacy of Homoeopathy in treatment of Sarcoidosis in all stages and all types, with amazing success when applied as per laws of similia and proves its superiority among all the existing streams of treatment. Further studies are needed to understand the mechanism of action of Homoeopathic remedies in Sarcoidosis.
