Definition

Rheumatoid arthritis (RA) is chronic multisystem disease of unknown origin, causing nonsuppurative arthritis (Sycosis) of peripheral joints with symmetrical distribution (Psora), producing pain (Psora/ Syphilis) , swelling (Psora/ Sycosis), stiffness (Psora/ Sycosis) and loss of function (Psora/ Syphilis).

The disease usually begins in middle age, more in females, but no age or sex is immune to it.

Cause

Etiology is still unknown.

There are following schools of thought-

- 1- Genetic predisposition- RA is common in HLADR 4 or HLADR 1 positive persons (Syphilis).
- 2- Infective theory- Mycobacteria, Paravoviruses, Retroviruses, Borrelia, Epstein Barr Virus, Mycoplasma as well as numerous others (Psora/ Sycosis/ Syphilis).
- 3- Autoimmune theory- T cells play the pivotal role in destructive RA by producing IgM (Psora/ Syphilis).

Pathogenesis

With advancement of disease, synovial membrane thickening (Sycosis), effusion (Psora/ Sycosis), articular cartilage degeneration (Syphilis) and osteoprosis start (Psora/ Syphilis). Ligaments and joint capsules become less effective supporting structures. Erosion of the articular cartilage (Syphilis), together with ligamentous changes, result in deformity (Sycosis/ Syphilis) and contractures (Sycosis/ Syphilis). As the disease progresses, pain and deformity increase ending with permanent disability.

Symptoms

Pain, morning stiffness, swelling, and systemic symptoms are common. (Psora/ Sycosis)

Swelling, pain, and stiffness in the joint, even when it is not being used. (Psora/ Sycosis)

Warmth around the joint. (Psora)

Deformities and contractures of the joint. (Sycosis/ Syphilis)

General symptoms, such as fever, malaise, loss of appetite and decreased energy. (Psora)

Rheumatoid nodules, particularly around the elbow. (Psora/ Sycosis)

Foot pain, bunions, and hammer toes with long-standing disease. (Psora/ Sycosis)

Patients with severe rheumatoid arthritis typically have multiple affected joints in the hands, arms, legs, and feet. Joints of the cervical spine may be involved. (Psora/ Sycosis/ Syphilis)

Raynaud's phenomenon, lymphadenopathy, osteoporosis, trigger finger, tenosynovitis, bursitis, subcutaneous nodules, episcleritis, scleritis and scleromalacia, keratoconjunctivitis Sicca, Sjogren's syndrome, Sicca syndrome, pericarditis with effusion, heart block, cardiomyopathy, coronary artery occlusion, aortic regurgitation, vasculitis, pleurisy, pleural effusion, entrapment neuropathies, peripheral neuropathy, cervical cord compression, anemia, thrombocytosis, Felty's syndrome, Baker's cysts in knees etc. are other manifestations of RA. (Psora/ Sycosis/ Syphilis)

Complications

Septic arthritis and amyloidosis. (Psora/ Syphilis/ Sycosis)

Diagnosis

Rheumatoid factor, Anti CCP and IgM positive.

Raised CRP, ESR, globulin and fibrinogen.

Decreased albumin, Hb.

Synovial fluid examination, synovial biopsy and arthroscopy.

X-rays

CT Scan

The American College of Rheumatology requires at least four of the following seven criteria to confirm the diagnosis:

- 1- Morning stiffness around the joint that lasts at least 1 hour

- 2- Arthritis of three or more joints for at least 6 weeks
- 3- Arthritis of hand joints for at least 6 weeks
- 4- Arthritis on both sides of the body for at least 6 weeks
- 5- Rheumatoid nodules under the skin
- 6- Rheumatoid factor present in blood testing
- 7- Evidence of rheumatoid arthritis on X-rays

Differential Diagnosis

SLE

Osteoarthritis

Psoriatic arthropathy.

Treatment

Treatment of RA can be done by a team consisting of Homoeopathic rheumatologists, physical and occupational therapists, social workers, rehabilitation specialists, and some times orthopaedic surgeons.

Medication

Top ten Homoeopathic remedies in decreasing order of importance in RA-

Rhus-t. > Bry. > Puls. > Led. > Caust. > Lyc. > Acon. > Colch. > Sulph. > Merc.

Surgery

Joint replacement surgery is also an option and is often effective in restoring function if irreversible changes have taken place.
