Definition

Confusion is the state of uncertainty about what is happening, intended, or what is required, resulting in loss of orientation, ability to place oneself correctly by time, location and personal identity. (Psora)

Causes

Confusion has multiple causes, including-

Environmental factors

- Altitude sickness (Psora)
- Dehydration (Psora/Causa occasionalis)
- Heatstroke (Psora)
- Hypothermia (Psora)

Injuries

- Head injury (Causa occasionalis)

Medical conditions

- Arrhythmia (Psora)
- Brain tumor (Psora/ Syphilitis)
- Complications from diabetes (Psora/ Syphilitis)
- Decreased hearing or vision (Psora/ Syphilitis)
- Decreased or blocked blood flow to the brain, as during a transient ischemic attack (TIA) or a stroke (Psora/ Syphilitis)
- Electrolyte imbalances, such as low levels of sodium and potassium in the blood (Psora/Causa occasionalis)
- Heart attack (Psora/ Syphilitis)
- Heart failure (Psora/ Syphilitis)
- Hyperthyroidism (Psora/ Syphilitis)
- Hypothyroidism (Psora/ Syphilitis)
- Infection (Psora/ Syphilitis)

- Low oxygen levels from chronic obstructive pulmonary disease (COPD), pulmonary embolism (PE) (Psora/ Syphilis)
- Malnutrition and vitamin deficiencies (Psora)
- Mental health problems, such as depression or schizophrenia (Psora/ Syphilis)
- Metabolism problems from liver or kidney failure (Psora/ Syphilis)
- Seizure disorder (Psora)
- Shock (Psora)
- Sleep problems, such as the inability to fall asleep, insomnia or sleep apnea (Psora)

Medications

- Anticholinergics
- Antidepressants
- Antihistamines
- Narcotic pain medicines
- Sedatives and tranquilizers

Substance abuse

- Alcohol or drug abuse or withdrawal (Causa occasionalis)

Pathophysiology

Confusion may arise suddenly or develop gradually over time. Confusion is the result of severe brain dysfunction (Psora). The following factors are implicated in cerebral perfusion abnormalities associated with brain dysfunction-

- Activation of microglia and neuronal apoptosis (Psora/ Syphilis)
- Brain atrophy (Syphilis)
- Decreased availability of acetylcholine (Psora)
- Dopamine, norepinephrine, and serotonin excess and their respective amino acid precursors (Psora/ Syphilis)
- Endothelial dysfunction (Psora)
- Increased blood-brain barrier permeability (Psora)
- Reduced blood flow (Psora/ Syphilis)
- Synaptic and neurochemical disturbances (Psora)
- The response of the brain to inflammation (Psora)
- White matter lesions (Syphilis)

Endothelial dysfunction, increased blood-brain barrier permeability, and reduced blood flow have been implicated in cerebral perfusion abnormalities associated with brain dysfunction. The response of the brain to inflammation, including activation of microglia and neuronal apoptosis, leads to synaptic and neurochemical disturbances. Decreased availability of acetylcholine during critical illness leads to decreased counter-regulatory activity in response to inflammatory disease states, causing additional injury and further neurotransmitter imbalances. Dopamine, norepinephrine, and serotonin excess and their respective amino acid precursors are also associated with brain dysfunction.

Sign and symptoms

Confusion is a change in mental status in which a person is not able to think with his or her usual level of clarity. Frequently, confusion leads to-

- Alteration in the sleep - wake cycle (Psora)
- Altered cognition, general behavior, motor activity and features of psychotic or neurotic conditions (Psora)
- Confusion for time, place, person (Psora)
- Distress (Psora)
- Feelings of disorientation (Psora)
- Impaired decision-making ability (Psora/ Syphilis)
- Inability tell correct time and the date (Psora)
- Memory disturbance (Psora/ Syphilis)
- Severity of confusion may fluctuate during the course of the day (Psora)
- The loss of ability to recognize people and or places (Psora)
- Thinking becomes disorganized (Psora)

Type of confusion

Confusion may be primary or secondary-

Primary confusion

Typically, the onset of primary conditions is insidious. Primary confusion is caused by a direct pathology in the central nervous system-

- Alzheimer's disease (Syphilis)
- CNS injury (Causa occasionalis)
- Creutzfeldt-Jakob Disease (Psora/ Syphilis)
- HIV dementia (Syphilis)
- Pick's disease (Syphilis)

Secondary confusion

Secondary confusion is caused by something else-

- Anemia (Psora/ Syphilis)
- Cerebrovascular disease (Psora/ Syphilis)
- Cerebrovascular insufficiency (Psora/ Syphilis)
- Concussion (Causa occasionalis)
- Constipation (Psora/ Syphilis)
- Dehydration (Psora/ Causa occasionalis)
- Depression (Syphilis)
- Electrolyte disturbance (Psora/ Causa occasionalis)
- Environmental (Causa occasionalis)
- Heart failure (Psora/ Syphilis/ Syphilis)
- Hyperthermia (Causa occasionalis)
- Hypothermia (Causa occasionalis)

- Malnutrition (Psora/ Syphilis)
- Migraine in children (Psora)
- Post-operative (Causa occasionalis)
- Psychosis (Psora/ Sycosis)
- Respiratory disease (Psora/ Sycosis/ Syphilis)
- Space occupying lesions (Psora/ Sycosis/ Syphilis)
- Systemic infections (Psora/ Syphilis)
- Terminal illness (Psora/ Sycosis/ Syphilis)
- Toxic problems (Psora/ Causa occasionalis)

On the basis of severity, confusion may be of the following types-

Mild Confusion

In mild confusion there may be disorientation for time, this means the patient does not know where they are in time. This may be for the hour, day, month or year. (Psora)

Acute Confusion

Acute confusion or delirium has been defined as a state of altered consciousness in which patients are bewildered and misinterpret the world around them. (Psora)

Severe Confusion

In more severe states there is disorientation for person, for example nurses may be believed to be members of the patient's family. (Psora/ Syphilis)

On the basis of stage of confusion, it may be of the following types-

Progressive confusion

The severity of confusion may fluctuate during the course of the day. As the condition becomes more severe place is also confused so the individual does not know where they are, often believing they are somewhere else. (Psora)

Delirium

Delirium is characterized by a disturbance of consciousness and a change in cognition that develop over a short period of time. The disorder has a tendency to fluctuate during the course of the day, and there is evidence from the history, examination or investigations that the delirium is direct consequence of a general medical condition, drug withdrawal or intoxication. (Psora)

Delirium tremens

Delirium tremens (DTs) is the most severe form of ethanol withdrawal manifested by altered mental status (global confusion) and sympathetic overdrive (autonomic hyperactivity), which can progress to cardiovascular collapse. (Psora/ Causa occasionalis)

Decreased level of consciousness

When consciousness is decreased, ability to remain awake, aware, and oriented is impaired. (Psora/ Syphilis)

Unresponsiveness

It is the quality of being unresponsive, not reacting, as a quality of people, it is marked by a failure to respond quickly or with emotion to people or events. (Psora/ Syphilis)

Intermittent confusion

Intermittent confusion is a mental state that comes and goes in which a person is disorientated to time, person, or place. (Psora)

Diagnosis

General examination

- Vital signs including orthostatic vital signs
- Complete neurologic exam including- deep tendon reflexes (DTR's), Cranial nerves exam (CN2-12), motor, sensory, gait
- Carotid and cardiac exam
- Lung exam
- Exam of the lower extremities

Diagnosis is made by use of a mental test score tool. Diagnostic criteria from the American Psychiatric Association for delirium is as below-

- Disturbance of consciousness (i.e. reduced clarity of awareness of the environment) with reduced ability to focus, sustain or shift attention.
- A change in cognition (such as memory defect, disorientation, language disturbance) or the development of a perceptual disturbance that is not better accounted for by a pre-existing or evolving dementia.
- The disturbance develops over a short period of time (usually hours to days) and tends to fluctuate during the course of the day.
- There is evidence from the history, physical examination, or laboratory findings that the disturbance is caused by the direct physiological consequences of a general medical condition, substance intoxication or substance withdrawal.

Questions to be asked (DSM IV)

The patient is asked the following questions-

- Age
- Time (to the nearest hour)
- Address for recall at end of test
- Year
- Name of hospital patient is in
- Recognition of 2 persons, (e.g. doctor, nurse)
- Date of birth
- Year of 1st World War
- Name of present monarch
- Count backwards from 20 to 1

Laboratory investigations

- CBC
- Electrolytes
- Glucose level
- Urine toxicology
- Electrocardiogram (ECG)
- 24-hour Holter monitoring
- CT of the head
- MRI of the brain
- Lumbar puncture for CSF analysis
- Electroencephalogram (EEG)

Treatment

The goal of treatment is to cure the underlying cause and prevent recurrences.

Bibliography

Chapter 17. Coma and Related Disorders of Consciousness > Confusion Adams & Victor's Principles of Neurology, 10e ... The term confusion lacks precision, but in general it denotes an inability to think with customary speed, clarity, and coherence. Almost all states of confusion are marked by some degree of inattentiveness and disorientation. In this condition the patient does not take into account all elements...

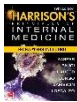

Chapter 20. Delirium and Other Acute Confusional States > Care of the Delirious and Confused Patient Adams & Victor's Principles of Neurology, 10e... These details are of the utmost importance. It has been estimated that 20 to 25 percent of medically ill hospital inpatients will experience some degree of confusion; moreover, elderly patients who are delirious have a significant level of mortality, variously estimated at 22 to 76 percent...

Chapter 35. Craniocerebral Trauma > Drowsiness, Headache, and Confusion Adams & Victor's Principles of Neurology, 10e

Chapter 58. Confusion > Risk Factors for Confusion in Hospitalized Patients (Inouye and Charpentier, 1996) The Patient History: An Evidence-Based Approach to Differential Diagnosis

Confusion and Delirium Harrison's Principles of Internal Medicine

Confusion, Stupor, and Coma Harrison's Manual of Medicine, 19e

Delirium in the Intensive Care Unit > Confusion Assessment Method-ICU (CAM-ICU) Critical Care

Drug Use Disorders and Addiction > THE CONFUSING TERMINOLOGY OF DRUG USE DISORDERS Goodman & Gilman's: The Pharmacological Basis of Therapeutics, 13e... The terminology of drug dependence, abuse, and addiction has long elicited confusion that stems from the fact that repeated use of certain prescribed medications can produce neuroplastic changes resulting in two distinctly abnormal states. The first state is dependence, or “physical...

Encyclopedia Homoeopathica

Evaluating Confusion in Older Adults Current Diagnosis & Treatment: Geriatrics

Neurologic Emergencies > C. Other Causes of Delirium or Confusion CURRENT Diagnosis & Treatment: Emergency Medicine, 8e... Table 37–5. Differential diagnosis of conditions causing delirium or confusion. Etiologic Category Clinical Findings Central nervous system mass lesion (subdural hematoma, cerebral infarction, brain tumor) Somnolence; neurologic examination shows focal...

Neurologic History & Examination > A. Confusion Clinical Neurology, 10e... Confusion may be reported by the patient or by family members. Symptoms can include memory

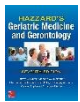

impairment, getting lost, difficulty understanding or producing spoken or written language, problems with numbers, faulty judgment, personality change, or combinations thereof. Symptoms of confusion may...

Postoperative Neurologic and Psychiatric Complications > CONFUSION, DELAYED EMERGENCE, AND MUSCLE WEAKNESS BY ANESTHETIC DRUGS Principles and Practice of Hospital Medicine, 2e... Many anesthetic drugs used in the perioperative period can cause confusion, delayed emergence, and muscle weakness. Although these symptoms can mimic a stroke, they are most likely caused by over sedation and reversal agents should be tried (naloxone for opioids and flumazenil...
