Intel only provides support for the Intel® Server products used with validated hardware [\(memory, add-in cards, and storage devices\) listed in the Intel® Server Configurator Tool and in the verified by Intel CMTL Tested Memory List](#)

The Computer Memory Test Labs\* (CMTL) list is built and maintained by CMTL and contains results of testing memory for compatibility with Intel® Server products requested by memory manufacturers.

Test results are posted on the CMTLabs.com website within 24 hours of completion. Test results are added to the Intel Server configurator when the next database update is scheduled (30-45 days)
