

Memory and Hardware Compatibility for the Intel® Server Boards Family

Documentation

Content Type	Compatibility
Article ID	000017642
Last Reviewed	10/15/2019

Intel only provides support for the Intel® Server products used with validated hardware (memory, add-in cards, and storage devices) listed in the [Intel® Server Configurator Tool](#) and in the verified by Intel [CMTL Tested Memory List](#). The Computer Memory Test Labs* (CMTL) list is built and maintained by CMTL and contains results of testing memory for compatibility with Intel® Server products as requested by memory manufacturers.

For the list of Intel® **only** products compatible with a specific Intel® Server Board or Intel® Server System, you can also use the [Product Specifications page](#). Choose the appropriate product by typing the product name. At the product level, on the left side of the page you'll find the Compatible products section.

[Demo: How to Navigate or Use the Intel® Server Configurator Tool.](#)

Compatibility list for Intel® Server Board and Intel® Server Systems is on the Intel® Server Configurator Tool,
