Warehouse Automation with Pick-to-Light is built into Dynamics 365 Supply Chain Management

Warehouse Automation Solution with Pick-to-Light technology, built directly into Microsoft Dynamics 365 Supply Chain Management. This product integrates both software and new custom-developed hardware, offering an unparalleled solution for boosting warehouse productivity, accuracy, and speed.

Key Benefits	Dynamics 365 SCM	As a native feature within Microsoft Dynamics 365 Supply Chain Management, our Pick-to-Light system provides seamless, real-time visibility, optimized workflows, and accurate data without the need for third-party integrations.
	Operational Efficiency	This solution drastically reduces manual interventions, minimizes errors, and accelerates key warehouse processes like picking, packing, and shipping.
	Hardware Innovation	Our custom hardware, developed specifically for this Pick-to-Light system, ensures precision and reliability in even the most demanding warehouse environments.
Core Features	Pick to Light	Improve picking speed and accuracy with our custom light-directed hardware, built to streamline order fulfillment directly within Dynamics 365 SCM.
	Pick from Light	Ensure higher order accuracy by guiding warehouse workers through illuminated, system-driven picking instructions, reducing errors.
	Zone/Cluster Picking	Maximize efficiency by enabling a single picker to handle multiple orders across different zones, reducing travel time.
	Pick Consolidation:	Consolidate picks from various zones into a single order, making packing and shipping smoother and faster.
	Smart Packing Station	Speed up packing with built-in parcel shipping integration and real-time weight verification to ensure accurate and efficient packaging.
Why Our Solution Stands Out	Dynamics 365 SCM	Our solution is not just integrated but fully built into the Microsoft Dynamics 365 platform, making it an essential feature for optimized warehouse management.
	Custom Hardware	The Pick-to-Light hardware enhances precision, allowing for faster, more reliable picking and packing operations.
	Proven ROI	By automating key warehouse processes and reducing manual errors, this solution drives significant operational improvements, leading to a faster return on investment.
Use Cases Across Industries	Retail & eCommerce	Efficiently manage high-order volumes with speed and precision, ensuring customer satisfaction.
	Manufacturing	Streamline the movement of materials and finished goods, optimizing the flow of production.
	Logistics	Improve shipment accuracy and minimize delays through automated picking, consolidation, and packing processes.
