

Basic care tips for your cabinets

- Cure time: Please allow the paint 2-4 weeks to cure (we added a hardener to the paint called a catalyst. The catalyzed paint takes 2-4 weeks to harden which makes the paint more durable).
- Wipe up spills, splatters and water spots as they occur.
- Clean spills as needed with a soft, lint-free cloth. **Use Dawn soap and warm water for cleaning grease and spills.** Dry surfaces immediately with a soft cloth.
- KEEP CABINETS DRY.**
- Avoid using tape, command strips or any adhesive on cabinets.
- Avoid using a dirty dishcloth or sponges, which could contain grease or detergents.
- Do not use products with bleach, ammonia or abrasive additives. Never use scouring pads, steel wool or powdered cleaners. Do not allow oven cleaners to come in contact with cabinets.
- Avoid placing small kitchen appliances (like coffee maker, toaster) where heat is directed onto cabinets. **Direct heat** may cause damage. For bathrooms, allow proper ventilation after hot showers and baths.
- Avoid draping damp clothes or dish towels over cabinet doors. Excessive moisture can cause permanent damage.
- Please avoid bumping the cabinets with vacuum or mop, this may cause damage.

Thank you for choosing M+M Cabinet Painting!
