A high-contrast, black and white photograph of a person walking away from the viewer on a dark, textured surface. A powerful, wide beam of light originates from the upper left, illuminating the person and their long shadow. The rest of the scene is in deep shadow.

Founded by Gareth Frankland, former CEO of architectural LED pioneer acdc, aeros is a UK based lighting technology company designed to provide lighting designers and consultants with new technology driven and forward-thinking tools in their toolbox.

The team have already worked on thousands of projects around the world, from state-of-the-art football stadia to the most luxurious of hotels; blue chip corporate headquarters to international retail roll-outs, no project is too big or small.

We work closely with the design team to help create your specification, supporting standard or bespoke solutions to help you achieve your project goals.

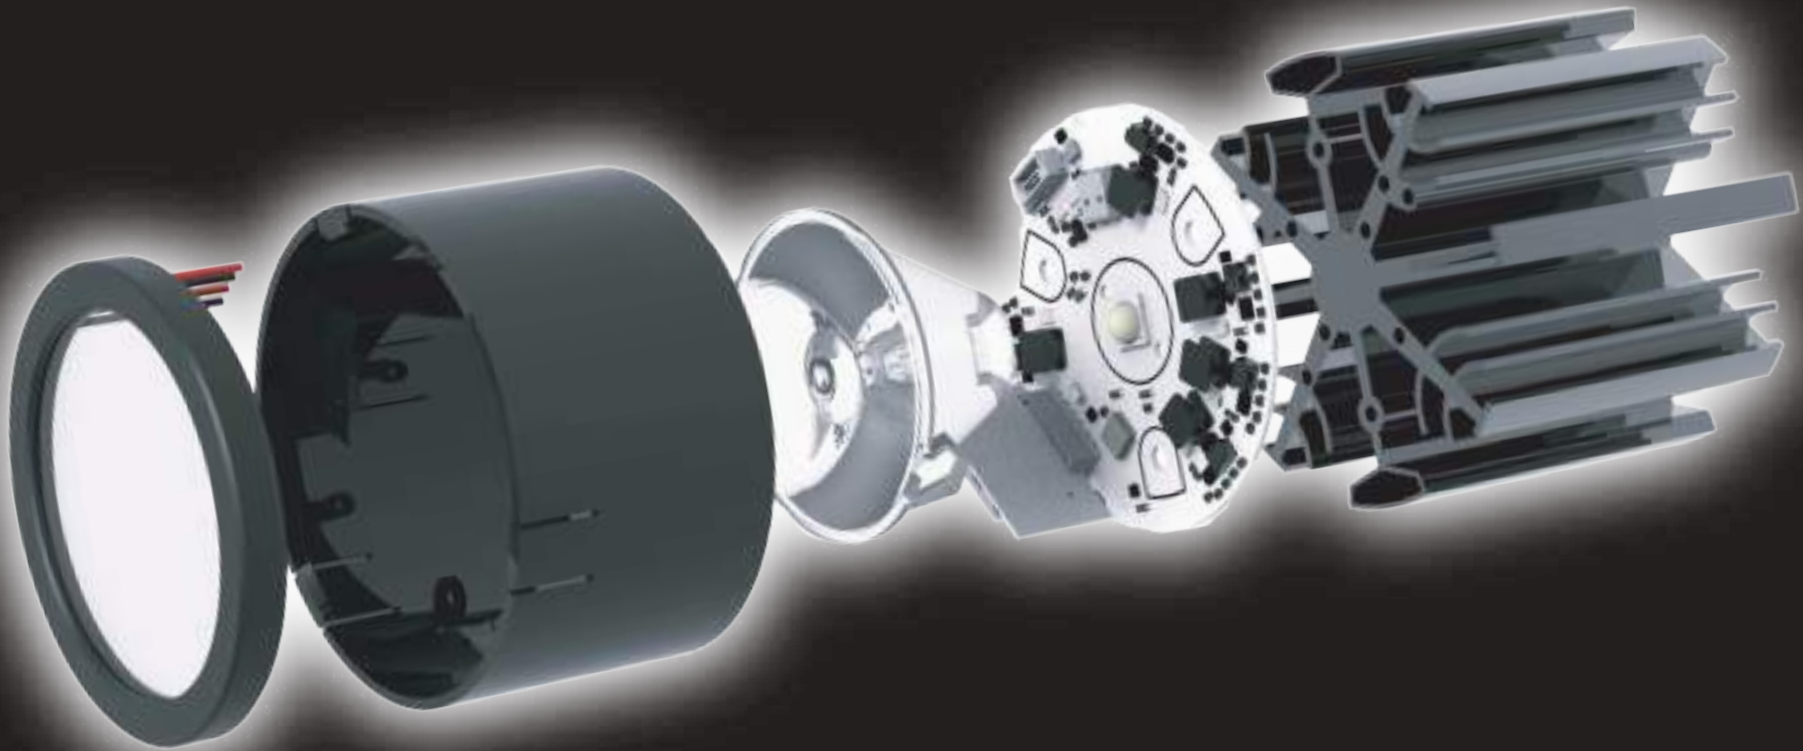

We understand light & design, and have decades of experience working with LEDs and controls technology, which means we are uniquely positioned to create technology led, well designed products for your projects.

By working with technology providers such as Casambi, BubblyNet, LensVector and Eulum, we blend their tech with our know how to deliver the most effective solution.

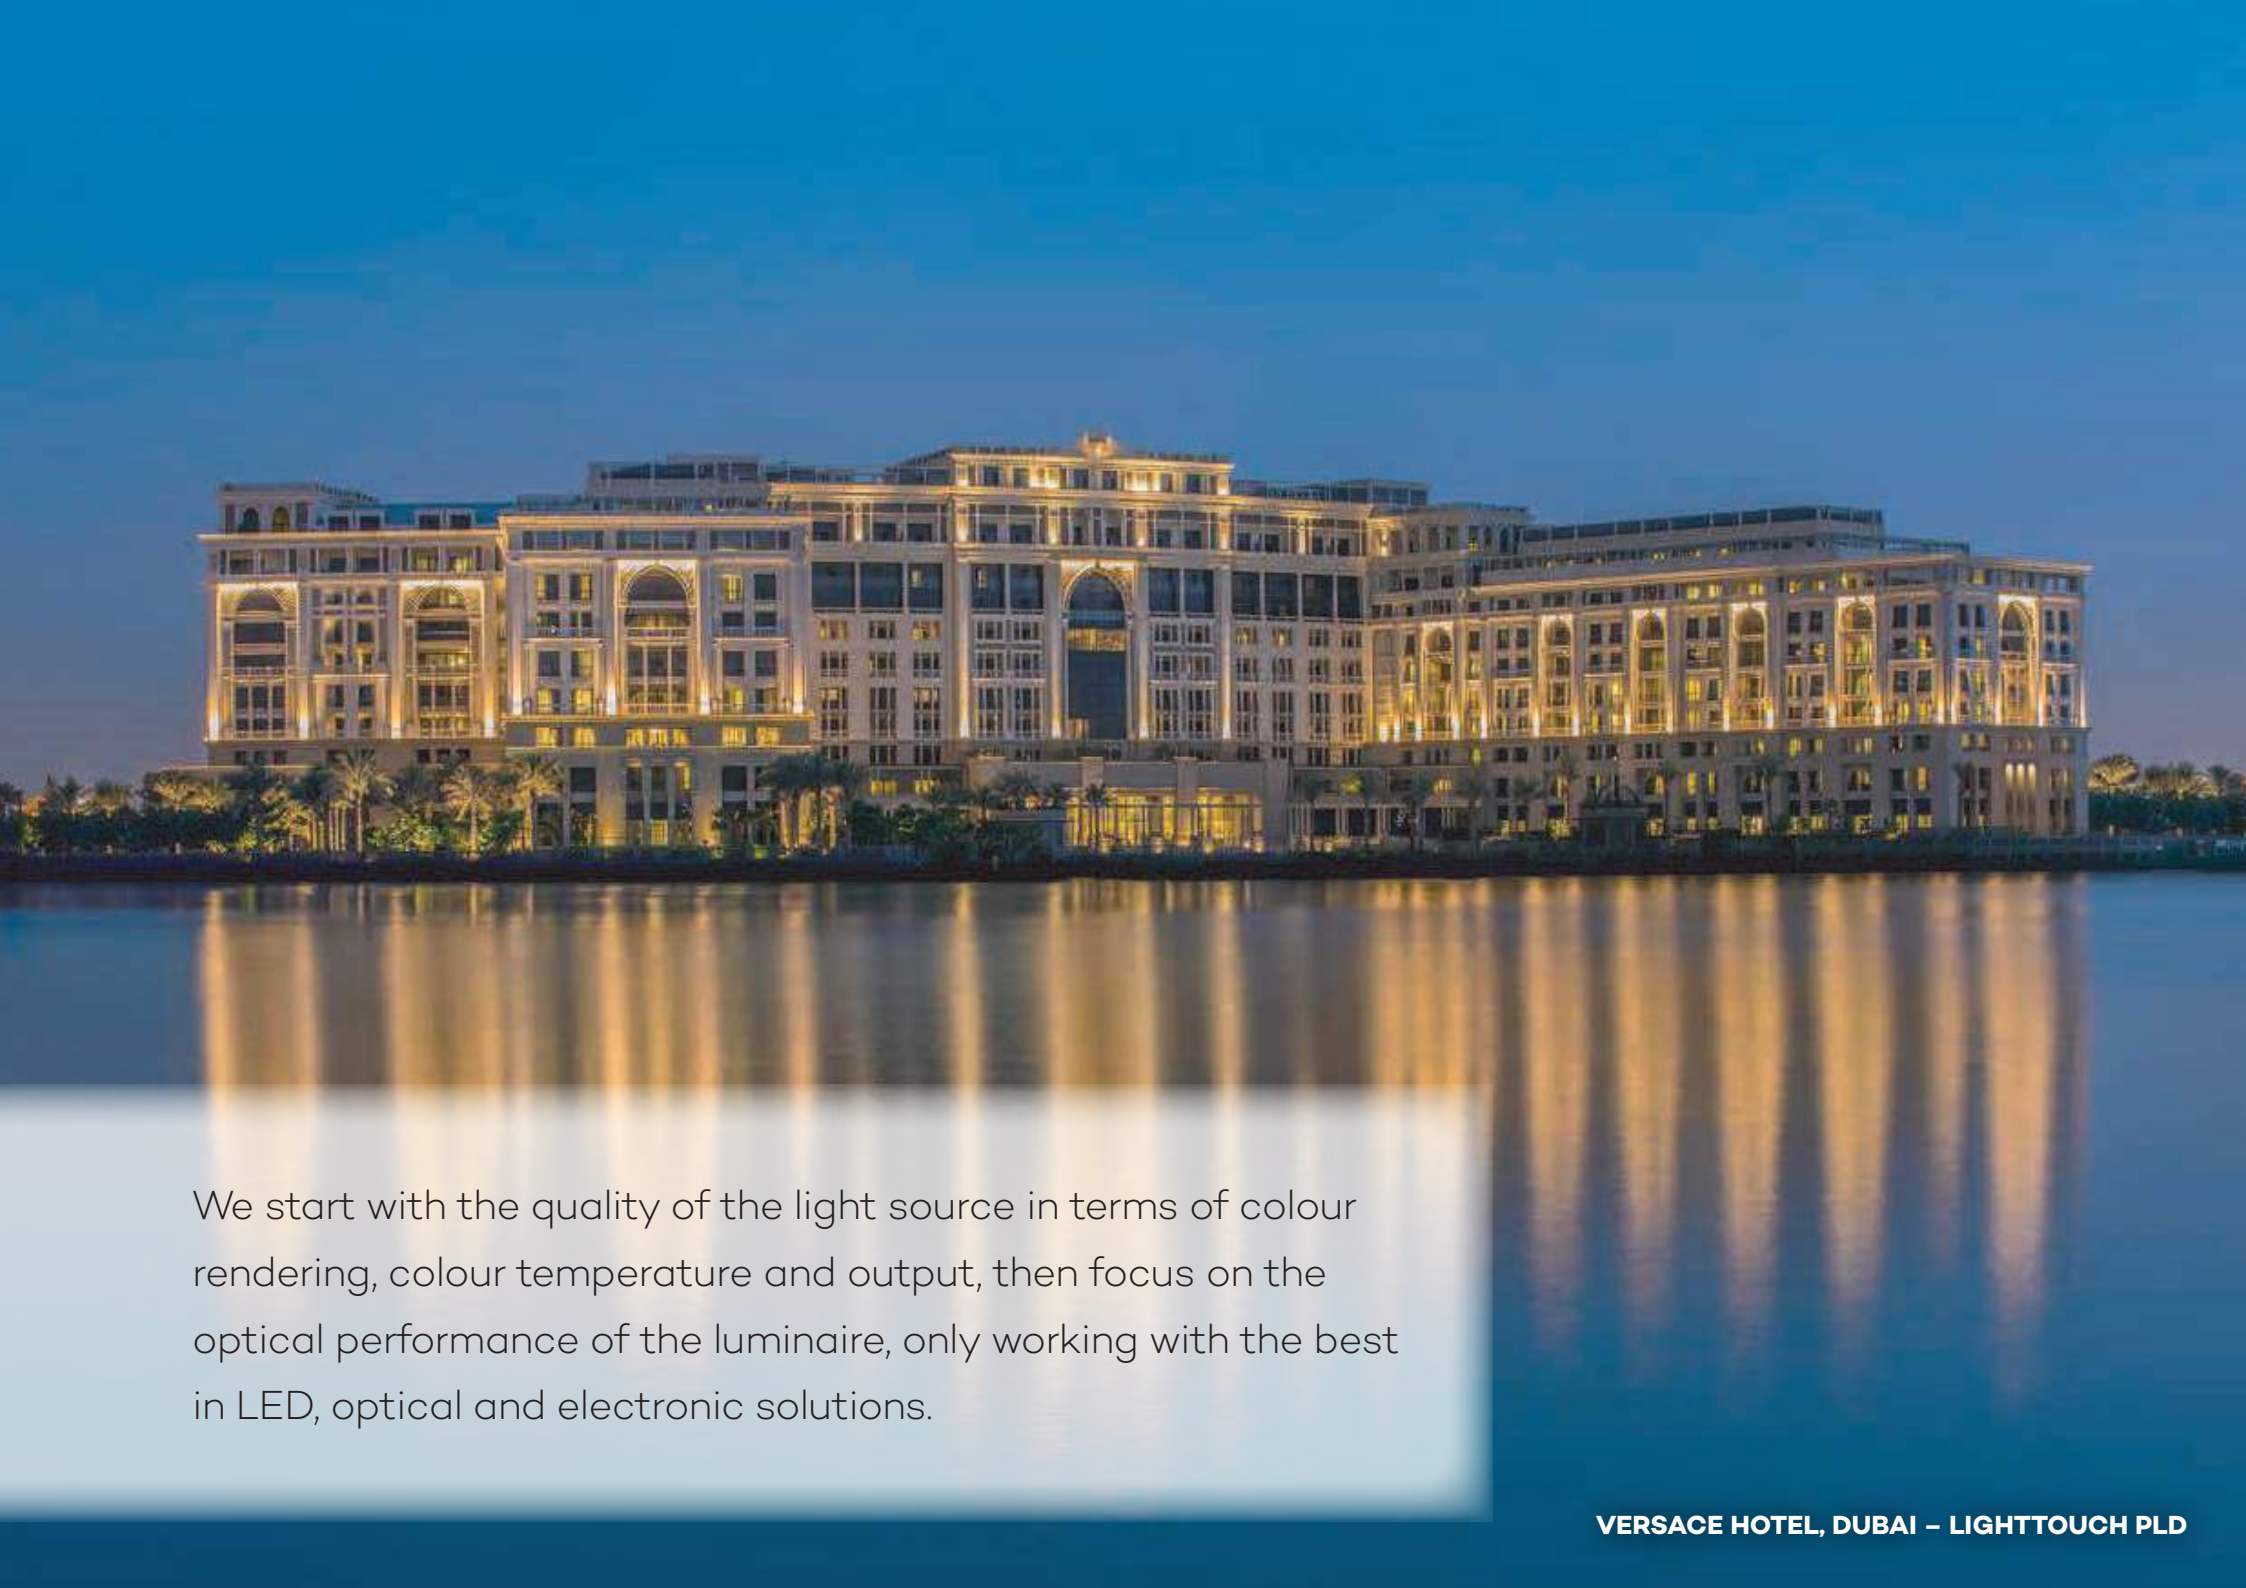

A black track spotlight is mounted on a ceiling, angled downwards. It is illuminating a dark, cracked concrete floor. The light creates a bright, circular pool of light on the floor, highlighting the texture of the cracks. The background is dark, making the light and the spotlight stand out.

# Our Products

Whilst LED has evolved rapidly over the past two decades, and output and efficiencies have increased significantly, some of the focus of quality of light and beam control has been lost.

We start with the quality of the light source in terms of colour rendering, colour temperature and output, then focus on the optical performance of the luminaire, only working with the best in LED, optical and electronic solutions.

# Our Solutions

Many of our products have digital Bluetooth control embedded within, which allows never before conceivable digital control of the beam, output and colour.

And although this is leading edge technology, we make sure we keep our solutions simple and effective.

# Our Locations

Our products are designed and built in the UK, with our facilities in London and South-East England.

Historically we have worked all over the world, and as the company evolves and develops, we are keen to work with distribution partners internationally
