WEST COAST OFFENSE:

RIG TO ROOF OPERATIONS

CLACKAMAS FIRE DIST. TRAINING CENTER

16170 SE 130TH AVE, CLACKAMAS OR 97015

8am-5pm (Lunch on your own)

Although arguably the most important reason for going “topside,” vertical ventilation is only one half of the total value of a company on the roof. This vertical ventilation class will provide the student with a well rounded skill set that focuses as much on the cut as it does with the decision making process and continued size-up of the incident. This class will also provide the students with an overall game plan to a flat roof operation including: Throwing primary and secondary ladders, where and why. Appropriate sounding and cutting techniques. Choosing the correct path of travel based off construction type, and 2 truck operations and communication. Come ready to work and refine your skills!
