

Adhesives & Glues

ENOXABOND

Solvent based synthetic rubber adhesive for bonding bitumen fiber boards, bitumen felt, plastic, laminates, veneer boards, rubber and plastic edging strips, rubber, leather, linoleum, felt, cork, foam to wood, chipboard, concrete, stone, metals and bitumen surfaces.

ENOXAGRIP

Wide range of Flexible tile adhesive mortars for indoor and outdoor areas for laying ceramic tile coverings and slabs on critical substrates such as Cement and cement-lime plasters, cement screeds and concrete substrates; Light weight AAC and concrete blocks ; Gypsum and anhydrite substrates (inside); Wet areas with periodic water penetration (e.g. bathrooms, kitchens and toilets, utility rooms); Balconies and terraces. Also special grades for laying glass mosaics or tiles not only where a uniform substrate colour is wanted, but also for the discoloration-proof fixing of bright and translucent marble, ceramics, fine stoneware and other natural stone slabs, using the thin-bed method.

Polymer modified tile adhesives for substrates subjected to slight deformation such as plasterboards, wood chip-boards, and heated floors, or even extended water holding areas like swimming pools. Also super flexible tile fibre induced adhesive used ideally on critical substrates and for installing large format tiles, supports high flex deformations.
